FINAL IRRIGABLE AREA SURVEY

This acreage tabulation is based on the ten-year irrigable area survey, which becomes effective at the beginning of the first year of the construction repayment period for the block (January 1, 1973).

1/--All units, unless designated otherwise, are farm units. A farm unit is a unit of land platted prior to October 1, 1962, as then referred to in the Columbia Basin Project Act.

2/--Water delivery unit--A unit of land, irrespective of ownership, that is served by a single turnout (except where more than one turnout is included in the original design of the layout of the unit and except where an additional turnout is subsequently installed and operated by the Project at the expense of the landowner for his own convenience) with a delivery elevation higher than the land therein originally classified as irrigable.

3/--Land in Class 6 is regarded as nonirrigable.

4/--Land designated as high is land which, although arable, is classified as nonirrigable because of higher elevation or location with respect to the turnout and measuring device provided for delivery of water from the Project irrigation system.

*--Includes area under high land contract.

The Final Irrigable Areas and Land Repayment classes of each Unit in Irrigation Block 80, as established and fixed by my certificate of [illegible], are shown on the following 21 sheets of this Irrigable Area Map.
