Project Manager, Mills, Wyoming
Attention: WY-4000, WY-4100, WY-6400
Assistant Superintendent, National Park Service, Lovell, Wyoming
Attention: Valerie Newman

From: Reservoir and River Operations, Billings, Montana

Subject: **Yellowtail Water Release Order - BHR No. 11-81 (Revision)**

CURRENT RESERVOIR CONDITIONS (August 8, 2011; 2:00 p.m.)

Elevation: 3650.23 Storage: 1,166,983 acre-feet; River Release: 9,000 cfs; Inflow: 6,100 cfs;

GENERAL COMMENTS:

The river gage height in Water Release Order BHR No. 11-81 corresponding to a flow of 8,000 cfs was incorrect and is revised as shown below:

The BIA called and requested a reduction in diversions to the Bighorn Canal. In addition, the high elevation snowmelt is essentially over and streamflows into Bighorn Lake continue to slowly decrease. To slow the evacuation of flood storage and reduce high flows in the Bighorn River, the following operation changes are required at Yellowtail Dam, Powerplant, and Afterbay.

YELLOWTAIL TURBINE RELEASE:

At 1600 hour on Monday, August 8, 2011:

Decrease average daily turbine release to 6,755 cfs (\approx 5,404 MW-Hrs/day using 30.0 cfs/mw).

YELLOWTAIL BYPASS RELEASE:

At 1600 hour on Monday, August 8, 2011:

*Decrease releases through the spillway gates to 1,500 cfs (\approx minimum @ 6 inch gate opening).
Maintain releases through the river outlet gates at 0 cfs.*

AFTERBAY RELEASE AND OPERATION:

At 1600 hour on Monday, August 8, 2011:

*Decrease diversions to the Bighorn Canal to 325 cfs (gage height = 74.52 with -1.26 shift).
Decrease river release to 8,000 cfs (gage height = 63.02 with 0.0 shift).
Decrease total release from the Afterbay to 8,325 cfs.*

SPECIAL AFTERBAY OPERATION REQUIREMENT:

Maintain the level of the Afterbay at or above elevation 3185 until further notice. It is also important to maintain the river stage within +/- 0.06 feet of the river stage set point value.

/S/ Tim H. Felchle
