

# RECLAMATION

*Managing Water in the West*

## **San Luis Drainage Feature Re-evaluation**

**Feasibility Report**

### **Appendix B**

**Appraisal Level Four-Account Analysis of the Environmental Quality Account and Other Social Effects Account Resources**

**U.S. Department of the Interior  
Bureau of Reclamation  
Mid-Pacific Region  
Sacramento, California**

**November 2007**

## **Mission Statements**

The mission of the Department of the Interior is to protect and provide access to our Nation's natural and cultural heritage and honor our trust responsibilities to Indian Tribes and our commitments to island communities.

The mission of the Bureau of Reclamation is to manage, develop, and protect water and related resources in an environmentally and economically sound manner in the interest of the American public.

## **Appendix B**

### **Appraisal Level Four-Account Analysis of the Environmental Quality Account and Other Social Effects Account Resources**

	NO ACTION / WITHOUT PROJECT	INVALLEY DISPOSAL	INVALLEY DISPOSAL GROUNDWATER QUALITY	INVALLEY DISPOSAL WATER NEEDS	INVALLEY DISPOSAL DRAINAGE IMPAIRED	OCEAN DISPOSAL	DELTA DISPOSAL CHIPS ISLAND	DELTA DISPOSAL CARQUINEZ STRAIT
<b>ENVIRONMENTAL QUALITY (EQ) ACCOUNT RESOURCES</b>								
<b>SURFACE WATER RESOURCES</b>								
Delta Drinking Water Intakes	Any improvements in WQ would be generally offset by reduced New Melones dilution releases. <i>No effect.</i>	Drainwater no longer discharged to or disposed of in the San Joaquin River. <i>No effect.</i>	Drainwater no longer discharged to or disposed of in the San Joaquin River. <i>No effect.</i>	Drainwater no longer discharged to or disposed of in the San Joaquin River. <i>No effect.</i>	Drainwater no longer discharged to or disposed of in the San Joaquin River. <i>No effect.</i>	Drainwater no longer discharged to or disposed of in the San Joaquin River. <i>No effect.</i>	Treated drainwater is disposed near Mallard and Rock Sloughs. Se, bromide, TDS, and TOC are expected to increase but the increase would not cause MCLs to be exceeded. <i>No significant effect.</i>	Treated drainwater is disposed near Mallard and Rock Sloughs. Se, bromide, TDS, and TOC are expected to increase but the increase would not cause MCLs to be exceeded. <i>No significant effect.</i>
Water Quality in the San Joaquin River and tributaries	Improvements in WQ due to discontinuation of GDA drainage would be somewhat offset by continued GDA seepage and storm flows. <i>Beneficial but not significant.</i>	Reduction in accretions to river due to land retirements, Firebaugh sumps, and shifting of drainage to disposal facilities. <i>Beneficial effect, but not significant.</i>	Reduction in accretions to river due to land retirements, Firebaugh sumps, and shifting of drainage to disposal facilities. <i>Beneficial effect, but not significant.</i>	Reduction in accretions to river due to land retirements, Firebaugh sumps, and shifting of drainage to disposal facilities. <i>Beneficial effect, but not significant.</i>	Reduction in accretions to river due to land retirements, Firebaugh sumps, and shifting of drainage to disposal facilities. <i>Beneficial effect, but not significant.</i>	Reduction in accretions to river due to land retirements, Firebaugh sumps, and shifting of drainage to disposal facilities. <i>Beneficial effect, but not significant.</i>	Reduction in accretions to river due to land retirements, Firebaugh sumps, and shifting of drainage to disposal facilities. <i>Beneficial effect, but not significant.</i>	Reduction in accretions to river due to land retirements, Firebaugh sumps, and shifting of drainage to disposal facilities. <i>Beneficial effect, but not significant.</i>
Flow in the San Joaquin River and Mud Slough	Flow decreases due to discontinuation of GDA drainage. <i>Adverse effect, but not significant.</i>	Flow decreases over project life due to removal of GDA drainage. <i>Adverse effect, but not significant.</i>	Flow decreases over project life due to removal of GDA drainage. <i>Adverse effect, but not significant.</i>	Flow decreases over project life due to removal of GDA drainage. <i>Adverse effect, but not significant.</i>	Flow decreases over project life due to removal of GDA drainage. <i>Adverse effect, but not significant.</i>	Flow decreases over project life due to removal of GDA drainage. <i>Adverse effect, but not significant.</i>	Flow decreases over project life due to removal of GDA drainage. <i>Adverse effect, but not significant.</i>	Flow decreases over project life due to removal of GDA drainage. <i>Adverse effect, but not significant.</i>
New Melones Reservoir Operations	Required dilution flow releases can be lowered. <i>Beneficial effect, but not significant.</i>	Required dilution flow releases can be lowered. <i>Beneficial effect, but not significant.</i>	Required dilution flow releases can be lowered. <i>Beneficial effect, but not significant.</i>	Required dilution flow releases can be lowered. <i>Beneficial effect, but not significant.</i>	Required dilution flow releases can be lowered. <i>Beneficial effect, but not significant.</i>	Required dilution flow releases can be lowered. <i>Beneficial effect, but not significant.</i>	Required dilution flow releases can be lowered. <i>Beneficial effect, but not significant.</i>	Required dilution flow releases can be lowered. <i>Beneficial effect, but not significant.</i>
Bay-Delta Water Quality	Drainwater no longer discharged to or disposed of in the San Joaquin River. <i>Beneficial effect, but not significant.</i>	Drainwater no longer discharged to or disposed of in the San Joaquin River. <i>Beneficial effect, but not significant.</i>	Drainwater no longer discharged to or disposed of in the San Joaquin River. <i>Beneficial effect, but not significant.</i>	Drainwater no longer discharged to or disposed of in the San Joaquin River. <i>Beneficial effect, but not significant.</i>	Drainwater no longer discharged to or disposed of in the San Joaquin River. <i>Beneficial effect, but not significant.</i>	Drainwater no longer discharged to or disposed of in the San Joaquin River. <i>Beneficial effect, but not significant.</i>	Water quality degraded in the immediate vicinity of the diffuser; water quality objectives (WQOs) met outside of mixing zone. <i>No significant effect.</i>	Water quality degraded in the immediate vicinity of the diffuser; water quality objectives (WQOs) met outside of mixing zone. <i>No significant effect.</i>
Ocean Water Quality	<i>No effect.</i>	<i>No effect.</i>	<i>No effect.</i>	<i>No effect.</i>	<i>No effect.</i>	Water quality degraded in the immediate vicinity of the diffuser; WQOs met outside of mixing zone. <i>No significant effect.</i>	<i>No effect.</i>	<i>No effect.</i>
Water Quality of Irrigation Supply	No changes in DMC water supply quality. <i>No effect.</i>	Firebaugh sump flows prevented from entering the DMC. <b>Significant beneficial effect.</b>	Firebaugh sump flows prevented from entering the DMC. <b>Significant beneficial effect.</b>	Firebaugh sump flows prevented from entering the DMC. <b>Significant beneficial effect.</b>	Firebaugh sump flows prevented from entering the DMC. <b>Significant beneficial effect.</b>	Firebaugh sump flows prevented from entering the DMC. <b>Significant beneficial effect.</b>	Firebaugh sump flows prevented from entering the DMC. <b>Significant beneficial effect.</b>	Firebaugh sump flows prevented from entering the DMC. <b>Significant beneficial effect.</b>
Construction Impacts on Surface Water Resources	<i>No effect.</i>	All effects temporary or mitigated by siting, design, or construction BMPs. <i>No residual significant effects.</i>	All effects temporary or mitigated by siting, design, or construction BMPs. <i>No residual significant effects.</i>	All effects temporary or mitigated by siting, design, or construction BMPs. <i>No residual significant effects.</i>	All effects temporary or mitigated by siting, design, or construction BMPs. <i>No residual significant effects.</i>	All effects temporary or mitigated by siting, design, or construction BMPs. <i>No residual significant effects.</i>	All effects temporary or mitigated by siting, design, or construction BMPs. <i>No residual significant effects.</i>	All effects temporary or mitigated by siting, design, or construction BMPs. <i>No residual significant effects.</i>
<b>GROUNDWATER RESOURCES</b>								
Drinking Water Supplies	Reduction in drainwater from retirements would slow contamination of drinking water sources. <i>Beneficial effect, but not significant.</i>	Reduction in drainwater would slow contamination of drinking water sources. <i>Beneficial effect, but not significant.</i>	Reduction in drainwater would slow contamination of drinking water sources. <i>Beneficial effect, but not significant.</i>	Reduction in drainwater would slow contamination of drinking water sources. <i>Beneficial effect, but not significant.</i>	Large reduction in drainwater would slow contamination of drinking water sources. <b>Significant beneficial effect.</b>	Reducing drainwater recharge would slow the transport of contaminated groundwater toward drinking water wells. <i>Beneficial effect, but not significant.</i>	Reducing drainwater recharge would slow the transport of contaminated groundwater toward drinking water wells. <i>Beneficial effect, but not significant.</i>	Reducing drainwater recharge would slow the transport of contaminated groundwater toward drinking water wells. <i>Beneficial effect, but not significant.</i>
Groundwater Salinity	Increase of 10 percent in GDA (adverse), but minor improvement in WWD. <i>Not a significant effect.</i>	Increase of 3 percent. <i>Not a significant effect.</i>	Increase of 3 percent. <i>Not a significant effect.</i>	Increase of 3 percent. <i>Not a significant effect.</i>	Increase of 3 percent. <i>Not a significant effect.</i>	Slight increase. <i>Not a significant effect.</i>	Slight increase. <i>Not a significant effect.</i>	Slight increase. <i>Not a significant effect.</i>
Bare-Soil Evaporation	Rate increase by 0.16 ft/yr. <i>Adverse effect, but not significant.</i>	Rate decreases by 0.24 ft/yr <b>Significant beneficial effect.</b>	Rate decreases by 0.23 ft/yr <b>Significant beneficial effect.</b>	Rate decreases by 0.23 ft/yr <b>Significant beneficial effect.</b>	Rate decreases by 0.23 ft/yr <b>Significant beneficial effect.</b>	Rate decreases by 0.24 ft/yr <b>Significant beneficial effect.</b>	Rate decreases by 0.24 ft/yr <b>Significant beneficial effect.</b>	Rate decreases by 0.24 ft/yr <b>Significant beneficial effect.</b>

	NO ACTION / WITHOUT PROJECT	INVALLEY DISPOSAL	INVALLEY DISPOSAL GROUNDWATER QUALITY	INVALLEY DISPOSAL WATER NEEDS	INVALLEY DISPOSAL DRAINAGE IMPAIRED	OCEAN DISPOSAL	DELTA DISPOSAL CHIPS ISLAND	DELTA DISPOSAL CARQUINEZ STRAIT
Undrained area affected by shallow water table	Area decreases by 44 mi <sup>2</sup> . Beneficial effect, but not significant.	Area decreases by 161 mi <sup>2</sup> . Significant beneficial effect.	Area decreases by 205 mi <sup>2</sup> . Significant beneficial effect.	Area decreases by 214 mi <sup>2</sup> . Significant beneficial effect.	Area decreases by 226 mi <sup>2</sup> . Significant beneficial effect.	Area decreases by 161 mi <sup>2</sup> . Significant beneficial effect.	Area decreases by 161 mi <sup>2</sup> . Significant beneficial effect.	Area decreases by 161 mi <sup>2</sup> . Significant beneficial effect.
<b>BIOLOGICAL RESOURCES</b>								
<b>Federally-listed Threatened and Endangered Species</b>								
Adverse effects resulting in take of a <i>federally-listed terrestrial</i> species and/or loss, degradation, fragmentation, or disturbance of habitat ( <i>excluding potential effects from Se bioaccumulation</i> ).	No significant effects.	Potentially significant adverse effects to occupied / unoccupied habitats (SJKF, BAEA) during construction or operation. All effects temporary or mitigable by utilizing appropriate siting, designs, or construction BMPs. No significant effects.	Potentially significant adverse effects to occupied / unoccupied habitats (SJKF, BAEA) during construction or operation. All effects temporary or mitigable by utilizing appropriate siting, designs, or construction BMPs. No significant effects.	Potentially significant adverse effects to occupied / unoccupied habitats (SJKF, BAEA) during construction or operation. All effects temporary or mitigable by utilizing appropriate siting, designs, or construction BMPs. No significant effects.	Potentially significant adverse effects to occupied / unoccupied habitats (SJKF, BAEA) during construction or operation. All effects temporary or mitigable by utilizing appropriate siting, designs, or construction BMPs. No significant effects.	Potentially significant adverse effects to occupied / unoccupied habitats (SJKF, BAEA) during construction or operation. Section 7 consultation has not been initiated for all out-of-valley facilities; however, all adverse effects are expected to be temporary or fully mitigable by utilizing appropriate siting, designs, or construction BMPs.	Potentially significant adverse effects to occupied / unoccupied habitats (SJKF, BAEA) during construction or operation. Section 7 consultation has not been initiated for all out-of-valley facilities; however, all adverse effects are expected to be temporary or fully mitigable by utilizing appropriate siting, designs, or construction BMPs.	Potentially significant adverse effects to occupied / unoccupied habitats (SJKF, BAEA) during construction or operation. Section 7 consultation has not been initiated for all out-of-valley facilities; however, all adverse effects are expected to be temporary or fully mitigable by utilizing appropriate siting, designs, or construction BMPs.
Adverse effects resulting in take of a <i>federally-listed freshwater aquatic/wetland</i> species and/or loss, degradation, fragmentation, or disturbance of its habitat ( <i>excluding potential effects from Se bioaccumulation</i> ).	No construction-related effects.  Reduction Mud Slough flows after 2009 potentially could adversely affect GGS, if present, but associated improvement in WQ would generally offset the flow reductions. No effect.  Occasional uncontrolled drainwater and stormwater of poor quality entering GDA wetland channels potentially could temporarily degrade some aquatic habitats that may support GGS and RLF. Potential adverse effect, but not significant.	Potential significant adverse effects to GGS and RLF from construction activities. All effects temporary or mitigable by siting, design, or construction BMPs. No significant effects.	Potential significant adverse effects to GGS and RLF from construction activities. All effects temporary or mitigable by siting, design, or construction BMPs. No significant effects.	Potential significant adverse effects to GGS and RLF from construction activities. All effects temporary or mitigable by siting, design, or construction BMPs. No significant effects.	Potential significant adverse effects to GGS and RLF from construction activities. All effects temporary or mitigable by siting, design, or construction BMPs. No significant effects.	Potential significant adverse effects to GGS and RLF from construction activities. All effects temporary or mitigable by siting, design, or construction BMPs. No significant effects.	Potential adverse effects to California clapper rail, saltmarsh harvest mouse, four vernal pool crustaceans, California tiger salamander, RLF, and GGS from construction of aqueduct <b>presumed to be significant</b> . Section 7 consultation will be reinitiated if alternative is selected.  Potential adverse effects to three Chinook salmon ESUs, Central Valley steelhead, Delta smelt, and green sturgeon during construction of underwater outfall <b>presumed to be significant</b> . Section 7 consultation will be reinitiated if alternative is selected.	Potential adverse effects to California clapper rail, saltmarsh harvest mouse, four vernal pool crustaceans, California tiger salamander, RLF, and GGS from construction of aqueduct <b>presumed to be significant</b> . Section 7 consultation will be reinitiated if alternative is selected.  Potential adverse effects to three Chinook salmon ESUs, Central Valley steelhead, Delta smelt, and green sturgeon during construction of underwater outfall <b>presumed to be significant</b> . Section 7 consultation will be reinitiated if alternative is selected.
	Minor beneficial effect to GGS and RLF from general overall improvement in water quality in Grasslands area habitats. Beneficial effect, but not significant.	Minor beneficial effect to GGS and RLF from general overall improvement in water quality in Grasslands area habitats. Beneficial effect, but not significant.	Minor beneficial effect to GGS and RLF from general overall improvement in water quality in Grasslands area habitats. Beneficial effect, but not significant.	Minor beneficial effect to GGS and RLF from general overall improvement in water quality in Grasslands area habitats. Beneficial effect, but not significant.	Minor beneficial effect to GGS and RLF from general overall improvement in water quality in Grasslands area habitats. Beneficial effect, but not significant.	Minor beneficial effect to GGS and RLF from general overall improvement in water quality in Grasslands area habitats. Beneficial effect, but not significant.	Minor beneficial effect to GGS and RLF from general overall improvement in water quality in Grasslands area habitats. Beneficial effect, but not significant.	Minor beneficial effect to GGS and RLF from general overall improvement in water quality in Grasslands area habitats. Beneficial effect, but not significant.
Adverse effects resulting in take of a <i>federally-listed marine/coastal aquatic</i> species and/or loss, degradation, fragmentation, or disturbance of its habitat ( <i>excluding potential effects from Se bioaccumulation</i> ).	No effects to marine / coastal species.	No effects to marine / coastal species.	No effects to marine / coastal species.	No effects to marine / coastal species.	No effects to marine / coastal species.	Adverse effects to tidewater goby and SNPL during construction potentially significant but fully mitigable by utilizing appropriate siting, design, or construction BMPs. Formal Section 7 consultation will be reinitiated if this alternative would be selected.	No effects to marine / coastal species.	No effects to marine / coastal species.

	NO ACTION / WITHOUT PROJECT	INVALLEY DISPOSAL	INVALLEY DISPOSAL GROUNDWATER QUALITY	INVALLEY DISPOSAL WATER NEEDS	INVALLEY DISPOSAL DRAINAGE IMPAIRED	OCEAN DISPOSAL	DELTA DISPOSAL CHIPS ISLAND	DELTA DISPOSAL CARQUINEZ STRAIT
Individual-level effects to <i>federally-listed special status species due to Se bioaccumulation</i> in the Bay-Delta	Minor adverse effects from continued Se loading in the San Joaquin River entering Bay-Delta. <i>Adverse effect, but not significant.</i>	Minor beneficial effect from reduction in San Joaquin River Se load entering Bay-Delta from project vicinity. <i>Beneficial effect, but not significant.</i>	Minor beneficial effect from reduction in San Joaquin River Se load entering Bay-Delta from project vicinity. <i>Beneficial effect, but not significant.</i>	Minor beneficial effect from reduction in San Joaquin River Se load entering Bay-Delta from project vicinity. <i>Beneficial effect, but not significant.</i>	Minor beneficial effect from reduction in San Joaquin River Se load entering Bay-Delta from project vicinity. <i>Beneficial effect, but not significant.</i>	Minor beneficial effect from reduction in San Joaquin River Se load entering Bay-Delta from project vicinity. <i>Beneficial effect, but not significant.</i>	Potentially harmful Se bioaccumulation in green sturgeon. Formal Section 7 consultation would be reinitiated if this alternative would be selected. <b>Potentially unavoidable adverse effect.</b>	Potentially harmful Se bioaccumulation in green sturgeon. Formal Section 7 consultation would be reinitiated if this alternative would be selected. <b>Potentially unavoidable adverse effect.</b>
Individual-level effects to <i>federally-listed special status species due to Se bioaccumulation</i> in the San Joaquin Valley	Minimal likelihood of elevated Se exposure risk to any listed species with continued operation of existing reuse area. <i>No significant effects.</i>	Potential adverse effects to SJKF at 19,000 acres of reuse areas and least tern at 3,290 acres of evaporation basins addressed during formal consultations with USFWS. <b>Incidental take would be a potentially unavoidable adverse effect.</b>	Potential adverse effects to SJKF at 16,700 acres of reuse areas and least tern at 2,890 acres of evaporation basins addressed during formal consultation with USFWS. <b>Incidental take would be a potentially unavoidable adverse effect.</b>	Potential adverse effects to SJKF at 12,500 acres of reuse areas and least tern at 2,150 acres of evaporation basins addressed during formal consultation with USFWS. <b>Incidental take would be a potentially unavoidable adverse effect.</b>	Potential adverse effects to SJKF at 7,500 acres of reuse areas and least tern at 1,270 acres of evaporation basins addressed during formal consultation with USFWS. <b>Incidental take would be a potentially unavoidable adverse effect.</b>	Potential adverse effects to SJKF at 19,000 acres of reuse areas. Formal Section 7 consultation would be reinitiated if this alternative would be selected. <b>Incidental take would be a potentially unavoidable adverse effect.</b>	Potential adverse effects to SJKF at 19,000 acres of reuse areas. Formal Section 7 consultation would be reinitiated if this alternative would be selected. <b>Incidental take would be a potentially unavoidable adverse effect.</b>	Potential adverse effects to SJKF at 19,000 acres of reuse areas. Formal Section 7 consultation would be reinitiated if this alternative would be selected. <b>Incidental take would be a potentially unavoidable adverse effect.</b>
Individual-level effects to <i>federally-listed special status species due to Se bioaccumulation</i> in Morro Bay vicinity	<i>No effect.</i>	<i>No effect.</i>	<i>No effect.</i>	<i>No effect.</i>	<i>No effect.</i>	<i>No significant effects anticipated.</i>	<i>No effect.</i>	<i>No effect.</i>
<b>State-listed Threatened and Endangered Species</b>								
Adverse effects resulting in take of a <i>state-listed terrestrial</i> species and/or loss, degradation, fragmentation, or disturbance of habitat ( <i>excluding potential effects from Se bioaccumulation</i> ).	<i>No effect.</i>  Potential improvements in foraging habitats for SWHA and SACR from land retirements (conversion to dryland farming or grazing). <i>Beneficial effect, but not significant.</i>	Potential significant adverse effects to SJKF, SWHA, PEFA, BAEA, BLRA, YECU, and BUOW during construction and operation. <i>All significant effects mitigable.</i>  Potential improvements in foraging habitats for SWHA and SACR from land retirements (conversion to dryland farming or grazing). <i>Beneficial effect, but not significant.</i>	Potential significant adverse effects to SJKF, SWHA, PEFA, BAEA, BLRA, YECU, and BUOW during construction and operation. <i>All significant effects mitigable.</i>  Potential improvements in foraging habitats for SWHA and SACR from land retirements (conversion to dryland farming or grazing). <i>Beneficial effect, but not significant.</i>	Potential significant adverse effects to SJKF, SWHA, PEFA, BAEA, BLRA, YECU, and during construction and operation. <i>All significant effects mitigable.</i>  Potential improvements in foraging habitats for SWHA and SACR from land retirements (conversion to dryland farming or grazing). <i>Beneficial effect, but not significant.</i>	Potential significant adverse effects to SJKF, SWHA, PEFA, BAEA, BLRA, YECU, and BUOW during construction and operation. <i>All significant effects mitigable.</i>  Potential improvements in foraging habitats for SWHA and SACR from land retirements (conversion to dryland farming or grazing). <i>Beneficial effect, but not significant.</i>	Potential significant adverse effects to SJKF, SWHA, BUOW, and giant kangaroo rat during construction or operation of aqueduct and other facilities. <i>All significant adverse effects expected to be temporary or mitigable by utilizing appropriate siting, designs, and BMPs.</i>  Potential improvements in foraging habitats for SWHA and SACR from land retirements (conversion to dryland farming or grazing). <i>Beneficial effect, but not significant.</i>	Potential significant adverse effects to SJKF, SWHA, BUOW, and giant kangaroo rat during construction or operation of aqueduct and other facilities. <i>All significant adverse effects expected to be temporary or mitigable by utilizing appropriate siting, designs, and BMPs.</i>  Potential improvements in foraging habitats for SWHA and SACR from land retirements (conversion to dryland farming or grazing). <i>Beneficial effect, but not significant.</i>	Potential significant adverse effects to SJKF, SWHA, BUOW, and giant kangaroo rat during construction or operation of aqueduct and other facilities. <i>All significant adverse effects expected to be temporary or mitigable by utilizing appropriate siting, designs, and BMPs.</i>  Potential improvements in foraging habitats for SWHA and SACR from land retirements (conversion to dryland farming or grazing). <i>Beneficial effect, but not significant.</i>
Adverse effects resulting in take of a <i>state-listed freshwater aquatic/wetland</i> species and/or loss, degradation, fragmentation, or disturbance of its habitat ( <i>excluding potential effects from Se bioaccumulation</i> ).	<i>No construction-related effects.</i>  <i>No effect.</i>	Potential significant adverse effects to GGS and RLF during construction activities. <i>All significant effects mitigable.</i>  <i>No effect.</i>	Potential significant adverse effects to GGS and RLF during construction activities. <i>All significant effects mitigable.</i>  <i>No effect.</i>	Potential significant adverse effects to GGS and RLF during construction activities. <i>All significant effects mitigable.</i>  <i>No effect.</i>	Potential significant adverse effects to GGS and RLF during construction activities. <i>All significant effects mitigable.</i>  <i>No effect.</i>	Potential significant adverse effects to GGS and RLF during construction activities. <i>All significant effects mitigable.</i>  <i>No effect.</i>	Potential significant effect to GGS, RLF, CLRA, BLRA, saltmarsh harvest mouse, Calif. tiger salamander, and Delta button-celery during construction of aqueduct. <i>All significant effects mitigable.</i>  Potential significant adverse effects to three Chinook salmon ESUs, Delta smelt, and green sturgeon during construction of outfall. <i>All significant effects mitigable.</i>	Potential significant effect to GGS, RLF, CLRA, BLRA, saltmarsh harvest mouse, Calif. tiger salamander, and Delta button-celery during construction of aqueduct. <i>All significant effects mitigable.</i>  Potential significant adverse effects to three Chinook salmon ESUs, Delta smelt, and green sturgeon during construction of outfall. <i>All significant effects mitigable.</i>

	NO ACTION / WITHOUT PROJECT	INVALLEY DISPOSAL	INVALLEY DISPOSAL GROUNDWATER QUALITY	INVALLEY DISPOSAL WATER NEEDS	INVALLEY DISPOSAL DRAINAGE IMPAIRED	OCEAN DISPOSAL	DELTA DISPOSAL CHIPS ISLAND	DELTA DISPOSAL CARQUINEZ STRAIT
	Minor improvement in water quality for GGS and RLF in Grasslands Area habitats. <i>Beneficial but not significant.</i>	Minor improvement in water quality for GGS and RLF in Grasslands Area habitats. <i>Beneficial but not significant.</i>	Minor improvement in water quality for GGS and RLF in Grasslands Area habitats. <i>Beneficial but not significant.</i>	Minor improvement in water quality for GGS and RLF in Grasslands Area habitats. <i>Beneficial but not significant.</i>	Minor improvement in water quality for GGS and RLF in Grasslands Area habitats. <i>Beneficial but not significant.</i>	Minor improvement in water quality for GGS and RLF in Grasslands Area habitats. <i>Beneficial but not significant.</i>	Minor improvement in water quality for GGS and RLF in Grasslands Area habitats. <i>Beneficial but not significant.</i>	Minor improvement in water quality for GGS and RLF in Grasslands Area habitats. <i>Beneficial but not significant.</i>
Adverse effects resulting in take of a <i>state-listed marine/coastal aquatic</i> species and/or loss, degradation, fragmentation, or disturbance of its habitat ( <i>excluding potential effects from Se bioaccumulation</i> ).	No effects to marine / coastal species.	No effects to marine / coastal species.	No effects to marine / coastal species.	No effects to marine / coastal species.	No effects to marine / coastal species.	Potentially significant adverse effects to tidewater goby and SNPL during construction fully mitigable by utilizing appropriate siting, design, or construction BMPs.	No effects to marine / coastal species.	No effects to marine / coastal species.
Individual-level effects to <i>state-listed special status species due to Se bioaccumulation</i> in the Bay-Delta	Minor adverse effects from continued Se loading in the San Joaquin River entering Bay-Delta. <i>Adverse effect, but not significant.</i>	Minor beneficial effect from reduction in San Joaquin River Se load entering Bay-Delta from project vicinity. <i>Beneficial effect, but not significant.</i>	Minor beneficial effect from reduction in San Joaquin River Se load entering Bay-Delta from project vicinity. <i>Beneficial effect, but not significant.</i>	Minor beneficial effect from reduction in San Joaquin River Se load entering Bay-Delta from project vicinity. <i>Beneficial effect, but not significant.</i>	Minor beneficial effect from reduction in San Joaquin River Se load entering Bay-Delta from project vicinity. <i>Beneficial effect, but not significant.</i>	Minor beneficial effect from reduction in San Joaquin River Se load entering Bay-Delta from project vicinity. <i>Beneficial effect, but not significant.</i>	Potential significant risk of Se toxicity to green sturgeon in immediate vicinity of outfall. <b>Potentially unavoidable significant adverse effect.</b>	Potential significant risk of Se toxicity to green sturgeon in immediate vicinity of outfall. <b>Potentially unavoidable significant adverse effect.</b>
Individual-level effects to <i>state-listed special status species due to Se bioaccumulation</i> in the San Joaquin Valley	Minimal likelihood of elevated Se exposure risk to any state-listed species with continued operation of existing reuse area. <i>No significant effects.</i>	Possible significant adverse effects to SWHA, SACR, and SJKF at 19,000 acres of reuse areas and PEFA at 3,290 acres of evaporation basins. <b>Potentially unavoidable significant adverse effect.</b>	Possible significant adverse effects to SWHA, SACR, and SJKF at 16,700 acres of reuse areas and PEFA at 2,890 acres of evaporation basins. <b>Potentially unavoidable significant adverse effect.</b>	Possible significant adverse effects to SWHA, SACR, and SJKF at 12,500 acres of reuse areas and PEFA at 2,150 acres of evaporation basins. <b>Potentially unavoidable significant adverse effect.</b>	Possible significant adverse effects to SWHA, SACR, and SJKF at 7,500 acres of reuse areas and PEFA at 1,270 acres of evaporation basins. <b>Potentially unavoidable significant adverse effect.</b>	Possible significant adverse effects to SWHA, SACR, and SJKF at 19,000 acres of reuse areas. <b>Potentially unavoidable significant adverse effect.</b>	Possible significant adverse effects to SWHA, SACR, and SJKF at 19,000 acres of reuse areas. <b>Potentially unavoidable significant adverse effect.</b>	Possible significant adverse effects to SWHA, SACR, and SJKF at 19,000 acres of reuse areas. <b>Potentially unavoidable significant adverse effect.</b>
Individual-level effects to <i>state-listed special status species due to Se bioaccumulation</i> in Morro Bay vicinity.	No effects.	No effects.	No effects.	No effects.	No effects.	No significant effects anticipated.	No effects.	No effects.
<b>Other (non-listed) Terrestrial Species and Habitats</b>								
Permanent loss of terrestrial habitat provided by existing agricultural and ruderal land if converted to project uses (including retirement).	109,100 total acres retired, including crop types that have high value to wildlife. <b>Potential unavoidable significant adverse effects for some foraging species.</b>	44,106 total acres retired. <i>No significant effects.</i>	92,592 total acres retired. <i>No significant effects.</i>	193,956 total acres retired, including crop types that have high value to wildlife. <b>Potential unavoidable significant adverse effects for some foraging species.</b>	308,000 total acres retired, including crop types that have high value to wildlife. <b>Potential unavoidable significant adverse effects for some foraging species.</b>	44,106 total acres retired. <i>No significant effects.</i>	44,106 total acres retired. <i>No significant effects.</i>	44,106 total acres retired. <i>No significant effects.</i>
	No new facilities would be constructed. <i>No effects.</i>	23,000 acres used for project facilities. <i>No significant effects.</i>	20,000 acres used for project facilities. <i>No significant effects.</i>	15,000 acres used for project facilities. <i>No significant effects.</i>	9,000 acres used for project facilities. <i>No significant effects.</i>	19,000 acres used for project facilities. <i>No significant effects.</i>	19,560 acres used for project facilities. <i>No significant effects.</i>	19,560 acres used for project facilities. <i>No significant effects.</i>
Permanent loss/degradation or creation/enhancement of common native or natural terrestrial habitat (e.g., annual grasslands).	<i>No anticipated adverse effects to existing native or natural habitats.</i>	No facilities would be sited, constructed, or operated in native or natural habitats. <i>No adverse effects.</i>	No facilities would be sited, constructed, or operated in native or natural habitats. <i>No adverse effects.</i>	No facilities would be sited, constructed, or operated in native or natural habitats. <i>No adverse effects.</i>	No facilities would be sited, constructed, or operated in native or natural habitats. <i>No adverse effects.</i>	Approximately 2000 acres would be temporarily disturbed during aqueduct construction but would be fully restored or mitigated.	Approximately 1000 acres would be temporarily disturbed during aqueduct construction but would be fully restored or mitigated.	Approximately 1000 acres would be temporarily disturbed during aqueduct construction but would be fully restored or mitigated.
	No agricultural lands would be converted to native or natural habitat; however, 4900 additional acres would be acquired and revegetated under the CVPIA Land Retirement Program. <i>Beneficial effect, but not significant.</i>	No agricultural lands would be acquired under project authority and converted to native or natural habitat. 4900 additional acres would be acquired and revegetated under CVPIA Land Retirement Program. <i>Beneficial effect, but not significant.</i>	No agricultural lands would be acquired under project authority and converted to native or natural habitat. 4900 additional acres would be acquired and revegetated under CVPIA Land Retirement Program. <i>Beneficial effect, but not significant.</i>	No agricultural lands would be acquired under project authority and converted to native or natural habitat. 4900 additional acres would be acquired and revegetated under CVPIA Land Retirement Program. <i>Beneficial effect, but not significant.</i>	No agricultural lands would be acquired under project authority and converted to native or natural habitat. 4900 additional acres would be acquired and revegetated under CVPIA Land Retirement Program. <i>Beneficial effect, but not significant.</i>	No agricultural lands would be acquired under project authority and converted to native or natural habitat. 4900 additional acres would be acquired and revegetated under CVPIA Land Retirement Program. <i>Beneficial effect, but not significant.</i>	No agricultural lands would be acquired under project authority and converted to native or natural habitat. 4900 additional acres would be acquired and revegetated under CVPIA Land Retirement Program. <i>Beneficial effect, but not significant.</i>	No agricultural lands would be acquired under project authority and converted to native or natural habitat. 4900 additional acres would be acquired and revegetated under CVPIA Land Retirement Program. <i>Beneficial effect, but not significant.</i>
