

Saige Harrington

A native of Idaho City, Idaho, Saige Harrington double majors in Forensic Chemistry and Criminal Justice at Boise State University (BSU). She works as a Physical Science Technician in the Resource and Technical Group's Soil and Water Laboratory. Below she talks about her experiences working at Reclamation through the Student Temporary Employment Program (STEP).

I applied for the STEP position after seeing a job announcement at BSU. The experience has been good. My coworkers at the labs are amazing.

I have been trained to test water samples for bacteria, ammonia, and chlorophyll. In the future, I will be trained to conduct several other tests.

After I get my undergrad degrees in Forensic Chemistry and Criminal Justice, I want to attend grad school in California. This will, hopefully, lead to a career in crime scene investigation.
