These comments are submitted on behalf of the Irrigation & Electrical Districts' Association of Arizona (IEDA), whose Members and Associate Members buy Colorado River federal hydropower.

We do not understand the total lack of analysis of power production impacts, a subject specifically listed as a part of one of Reclamation's stated purposes for this study. This oversight was called to your attention by both WAPA and CREDA (4/30/20 Ltr) and then ignored. Since hydropower pays the bills and CRSP and Hoover power are already above market, someone should be worried that additional price escalating impacts could leave Reclamation with a significantly reduced market.
