Subject: I support the 3588 plan for the Proposed SEIS Guidelines

This email has been received from outside of DOI - Use caution before clicking on links, opening attachments, or responding.

Dear Project Manager:

I am writing to provide feedback for the Supplementary Environmental Impact Statement (SEIS) to the Colorado River Interim Guidelines for Lower Basin Shortages and Coordinated Operations for Lake Powell.

I believe the Bureau of Reclamation needs to take immediate action due to declining water levels in reservoirs and to protect the future of recreation on the reservoirs. I have concerns that if BOR adopts a plan that doesn't stabilize the reservoirs at a higher level, then National Park Service might choose to close and decommission recreation infrastructure.

There is a politicized movement from so-called environmentalists who ignore science to clamor for a pre-civilization fantasy of returning our public lands to some idealized state separate from the human world. Not only is this impossible, it's dangerous. We need our dams and reservoirs and we need to preserve the incredible recreation opportunities that they provide as a multi-billion dollar side benefit.

We are already starting to see unthinkable impacts to recreation because of the lack of viable guidelines for addressing shortages in Lake Powell and Lake Mead. BOR may need to take unprecedented actions in order to preserve water levels in Lake Powell and Lake Mead. I support the BlueRibbon Coalition's Path to 3588' Plan as it will address low water levels in Lake Powell and Lake Mead. This plan is a common sense path that balances the needs of all the water users in the basin. By adjusting outflows against actual inflows and current lake levels in the reservoirs, this plan creates a sustainable path forward for adaptively managing these reservoirs instead of managing them headlong into a crisis. I oppose BOR's current path of liquidating these reservoirs to the point of crisis. The substantial pain at the end of the path BOR is currently on will be far worse than the relatively minor temporary pain required now to correct course.

As the Bureau of Reclamation creates alternatives, BOR needs to strongly consider the needs of recreational users and balance these needs along with the interests of other water users. Outdoor recreation generates billions of dollars each year, sustaining many local economies. These communities rely on continued recreation access to Lake Powell and Lake Mead for continued economic growth. These communities, which include neighboring Tribal Nations, would suffer significant losses if recreation is lost or decreased due to water elevation levels. As launch ramps and marinas close due to water levels, businesses are hurt and economic losses impact the entire region surrounding the Lake. NPS estimates that both Lake Mead and Lake Powell produce almost \$500 million in direct economic impact to gateway communities, and we estimate that the broader impact is measured in billions. This economic impact dwarfs the economic impact created by power. By developing a "recreation alternative" BOR will also have a plan that allows for better water level buffers that are needed to prevent reaching the points of lost power generation capacity and/or dead pool.

I hope BOR will include analysis of the economic importance of recreation in addition to feedback on power generation and water deliveries. Because there are so many variables affecting the lake's elevation such as precipitation, snowpack, runoff, release volumes, and other reservoir elevations the Bureau needs to consider

changing the "target" elevation. In the long run, I think 3588 feet is a better target elevation for Lake Powell and an elevation between 1050 and 1075 is a better elevation for Lake Mead to meet the demand for recreation on the lake in a way that also protects the power generation and water right interests.

Sincerely,

JUSTIN PARK
