Is it possible to create vertical farming that uses and recycles water in the same way as Las Vegas &quot;borrows&quot; water from Lake Mead?

It seems like we need to produce vegetation and conserve water. We could, therefore, move the farming to the water and allow it to drain back into the Colorado River.

Vertical farming seems to be the most water efficient and produces large quantities.

Thanks for all of your work to solve this vast issue.  
Staci
