CLIMATE SUMMARY

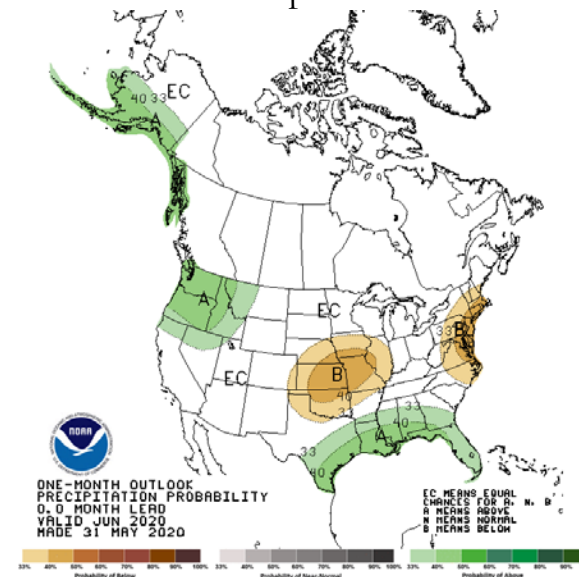

The climate in the Bighorn Basin above Yellowtail Dam was much drier and warmer than average during May.

Record setting temperatures at the end of May melted snowpack quicker than normal leading to increased inflows towards the end of May into the start of June.

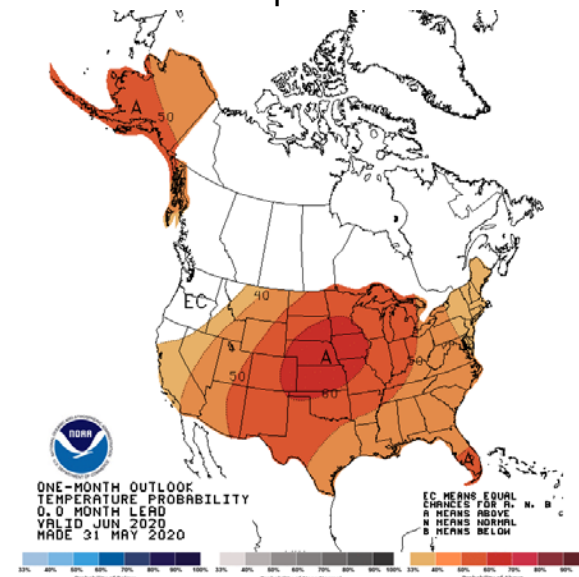

The climate outlook for June shows there is an equal chance precipitation will be above average, below average or average in the Bighorn Basin. There is a 40-50 percent chance temperatures will be above average.

FORECAST SUMMARY

SNOTEL data, streamflow data and planned releases from Boysen and Buffalo Bill Reservoirs are used to compute an inflow forecast for Bighorn Lake.

OPERATIONS REVIEW (October 1 through June 1)

River releases were decreased to 2,000 cfs during May due to lower than forecasted inflows. Storage in Bighorn Lake increased by 9.9 feet or 64,700 AF during May. The reservoir elevation on May 31 was approximately 1 foot lower than what forecasted under median inflow conditions.

Bighorn Lake Inflow and Release

OPERATIONS OUTLOOK (June 1 through October 31)

The river release rate from Yellowtail Dam was increased to 2,250 cfs by June 4. Releases may decrease or increase during the rest of June based on actual conditions. In accordance with current criteria, releases from Yellowtail Dam are adjusted as needed based on actual and revised forecasted inflows to stay on track with the June 30 elevation target while maintaining a release of 2,000 cfs or more. The end of June elevation target based on the current June through July inflow forecast, 444 kaf, is 3638.2 feet.

OPERATIONS OUTLOOK (June 1 through October 31)

There is approximately 70 cfs of gain between Yellowtail Dam and Yellowtail Afterbay Dam from spring flowing into Yellowtail Afterbay. Total release from Yellowtail Dam is 70 cfs less than total release from Yellowtail Afterbay Dam. Yellowtail Powerplant is limited to 3 units due to on-going refurbishment project. Irrigation diversions started on April 16.

Release Outlook by Outlet

Currently all releases are through the powerplant. Powerplant bypass releases would only be expected under maximum inflow conditions during June and July.

OPERATIONS OUTLOOK (June 1 through October 31)

Projected elevations and the range of river releases are based on the median, minimum, and maximum inflow forecasts. End-of-month elevations and river releases vary based on the difference between forecasted inflow scenarios.

The elevation of Bighorn Lake at the end of June is expected to be between 3630 and 3637 feet. Bighorn Lake is expected to fill to normal full pool, elevation 3640 feet, under maximum inflow conditions.
