

A Dream---Ahead of Schedule

A year ago, discussion of construction of a pipe-line from Boulder Lake to bring water into Vegas Valley, was a dream—according to bureau of reclamation cost estimates, a decidedly fantastic dream.

Today, it's a reality—ready to serve the gigantic magnesium plant with all that's necessary to its operation, with a considerable safety factor, as to quantity.

A year ago it was far away in the realm of what might come some day, but was not regarded as practical because of the cost.

That it's in service today indicates just how fast we're moving in these parts as a result of war demands, and also what man can do, given the necessary funds.

There's a tribute to the construction company that built it in three months, finishing two weeks ahead of schedule—no mean achievement in itself, considering the many construction obstacles and difficulty of obtaining material.

This coupled with the fact that one power transmission line will be in operation next month—two months ahead of schedule, indicates things are moving along quite nicely at the plant.
