PRELIMINARIES PROGRESS

It is indeed a big project that requires a whole year for preliminary preparation by the contractors after the contract is let.

Yet that is exactly the situation on the Hoover Dam project. Last March the first work was done by Six Companies, Inc. By next March the preliminaries will have been completed.

The Six Companies schedule of work calls for completion of "camp" facilities in Boulder City by February, 1932.

In another month or two the construction of buildings and major improvements in Boulder by the contractors will become a thing of the past.

The New Mexico Construction company, also, will be done by March with building of streets and water and sewer system.

The "boys of Boulder Dam" will then be devoting their entire time to the building of the dam itself.
