

Wilbur Accepts Bid of Six Companies for New Dam on Colorado River

Specifications For the Huge Structure Are Made Public; Work Will Start Soon.

WASHINGTON, March 11.—(P)—Secretary Wilbur today accepted the \$48,890,995 bid of the Six Companies, incorporated, of San Francisco for building the Hoover dam, power house and appurtenant works at the Boulder canyon project.

Recognition of the company's offer as the low bid was tantamount to awarding the contract and cleared the way for starting construction on one of the greatest peace time engineering feats ever attempted. Estimated cost of the dam, power system and appurtenances, such as the intake towers, spillways and diversion tunnels totals \$109,000,000, but approximately half of this will be supplied by the government in materials.

The company will be notified immediately that its bid was accepted and instructed to start work when ready. The contract will be delayed several days, as it must be accepted by the company, a surety bond of \$5,000,000 posted and approved by Secretary Wilbur.

The specifications require that work be started within 30 days after the builder is given notice to proceed, and the dam must be completed within six and one-half years, with a penalty of \$3,000 daily for each day longer.

F. T. Crowe, chief of construction operations for the Six Companies, Inc., a former construction engineer for the reclamation bureau, and his company have notified the department work could be started within a few days.

The notification of acceptance was signed also by Reclamation Commissioner Mead, Assistant Reclamation Commissioner Dent, Solicitor Finney of the interior department by Executive Assistants Dobell and Ely and E. K. Burlew, assistant to Secretary Wilbur.

Senator Johnson of California, who was to have been present, sent regrets by Representative Swing that he was unable to attend because of illness.

The Six Companies, Inc., was a merger of as many western construction companies, several of whom have constructed other projects for the reclamation bureau.

Representative Swing of California, co-author of the bill under which the \$165,000,000 Boulder canyon project is being built, was present for the signing.

Wilbur used an old, heavy personal pen, which he refers to as his "important pen," to sign the "award of bid," the technical term applied to accepting the low offer.

With the same pen he signed the agreement putting the rich Kettleman Hills oil field of California on the unit plan of operation, and other important contracts of the interior department.

Reclamation Commissioner Mead, whose bureau will supervise the construction of the dam and other parts of

the project, and other officials of the interior department also were present.

Opening the way for actual construction of the great dam, which will rear its crest 727 feet above the bottom of the Colorado river in Black canyon near Las Vegas, Nev., signalizes the beginning of the central part of the Boulder canyon project.

The dam, which will be 1,180 feet long, spanning the river between Nevada and Arizona, will be the largest in the world. It will be 650 feet thick at the base, of the arch gravity type, or curving between the two ends, and 45 feet thick at the top.

Between 2,000 and 3,000 men will be employed in building it when work gets in full stride. Most of them will live in Boulder City, the model town to be constructed 8 miles from the dam site, and connected with the dam by a railroad and highway, now being built.

From the city, inhabitants will be able to see the huge reservoir backed up by the dam, which will create a lake 110 miles long and ranging from 600 feet deep downward to around 100 in the channels of the various small tributary canyons.

The model town will cost about \$2,000,000, and be ready for occupancy within a few months.
