

# Research Workers Coming to Boulder

3-11-32  
This summer Boulder City will be the scene of intensive research work being done by a group of doctors and scientists from Harvard university. This party will conduct a three months research on heat prostration.

The scientists have been conducting a similar study of the working conditions under all climates, under conditions of extreme heat, cold and high altitude.

The laboratory in Boulder City will be under the direction of Dr. D. W. Dill and Prof. L. J. Henderson. The party will arrive in Boulder City on June 1, and the work will extend until the last of August. During this time they will be in the field conducting investigations at all times.
