RIVER

In the bottom of Black Canyon where three thousand men are building Hoover Dam, intense activity abounds twenty-four hours a day, the workings being spangled with lights every night as the contractors speedily execute plans carefully laid by Bureau of Reclamation engineers over a period of years.

View shows the dam site, in the background; the Nevada end of the lower steel truck bridge which will span the river, at the left; power lines; three footbridges, and the outlets of the diversion tunnels, one portal of which is obscured by a building at the extreme left.—Bureau of Reclamation Photo.
