
Government Bldg Steps Being Built

3/31/32
Landscaping of the government administration building grounds and building of flights of wide concrete steps to approach the front entrance from the park and boulevard is now in progress, a

crew of a score of men being occupied with pouring of concrete and planting of shrubs.

The front entrance, at the south side of the building, facing town, will be approached by flights of wide steps, alternating with stretches of concrete sidewalk up the terraced slope, which will be planted in lawn.

Construction of sidewalks around the building, and grading and planting of the entire scene around the building are being pushed by government employes.
