

# Uncle Sam's Newest Northwest Project

Columbia River near Grand Coulee, and, superimposed, the Coulee dam at damsite.

Another mighty project for the Pacific northwest is the \$63,000,000 harness for the Columbia river at the Grand Coulee in eastern Washington. The Grand Coulee, a deep chasm once forming the river bed, will be utilized as a reservoir. A 145-foot dam across the Columbia to generate 700,000 horsepower can later be raised to 370 feet to generate over 2,000,000 horsepower.
