Subject: Approval of Calendar Year (CY) 2025 Colorado River Water Diversion – Bullhead City (BHC)

Dear Mr. Cotter:

The Bureau of Reclamation received BHC's CY 2025 Colorado River water diversion estimate in which BHC requests approval to divert up to 13,730 acre-feet (AF) in CY 2025. In accordance with Title 43, Code of Federal Regulations Part 417 (Part 417), this letter provides BHC with notice of my determination regarding BHC's proposed diversion and beneficial use of Colorado River water for CY 2025.

Pursuant to Contract No. 2-07-30-W0273, as amended, BHC is entitled to divert up to 15,210 AF per year of Arizona fourth priority Colorado River water for use within BHC's service area. Pursuant to two separate subcontracts with the Mohave County Water Authority, BHC is also entitled to divert up to 9,139 AF per year of Arizona fourth priority Colorado River water.

Reclamation notes that, in September 2017, BHC commenced operation of its treated effluent Injection Well System project funded under the Pilot System Conservation Program. In accordance with System Conservation Implementation Agreement No. 15-XX-30-W0587, as amended, it is anticipated that BHC will operate the Injection Well System in CY 2025 to create System Conservation Water, which will remain in Lake Mead for the benefit of Colorado River System storage. BHC estimates that the Injection Well System will create 50 AF of System Conservation Water in CY 2025.

On August 15, 2024, Reclamation released its Colorado River Basin August 2024 24-Month Study,<sup>1</sup> which projects Lake Mead's most probable elevation on January 1, 2025 to be 1,062.32 feet. In its letter dated August 26, 2024, Reclamation announced that, in accordance with the 2007 Interim Guidelines,<sup>2</sup> Lake Mead and the lower Colorado River will operate in a

<sup>1</sup> Available at <https://www.usbr.gov/lc/region/g4000/24mo/>.

<sup>2</sup> Referring to *Colorado River Interim Guidelines for Lower Basin Shortages and the Coordinated Operations for Lake Powell and Lake Mead* dated December 13, 2007.

Tier 1 Shortage Condition in CY 2025. In addition, the 2019 *Lower Basin Drought Contingency Plan Agreement* (LB DCP Agreement) will also govern the operation of Lake Mead for CY 2025. In accordance with Section XI.G.2.D.1.a of the 2007 Interim Guidelines, 2.48 million AF is apportioned for consumptive use in the state of Arizona in CY 2025 (a reduction of 320,000 AF from its 2.8 million AF basic apportionment). Additionally, in accordance with Section III.B.1.a of Exhibit 1 to the LB DCP Agreement,<sup>3</sup> the state of Arizona will be required to make DCP Contributions in the total amount of 192,000 AF in CY 2025.

Consistent with the Arizona mainstream Colorado River water priority system, there are no reductions to the water supply available to first, second and third priority entitlement holders for CY 2025. As noted in Reclamation's August 26<sup>th</sup> letter, the Arizona fourth priority Colorado River water available supply for CY 2025 is 1,150,354 AF on a consumptive use basis. Of this amount, 113,940 AF,<sup>4</sup> on a diversion basis, is available for distribution among mainstream fourth priority entitlement holders for use in CY 2025 in accordance with the state of Arizona's August 6, 2009, Arizona Shortage Sharing Recommendation<sup>5</sup> and the "pool" approach described by letter dated January 25, 2021.<sup>6</sup> Reclamation has determined that the available Arizona mainstream fourth priority water supply is sufficient to satisfy all initial on-river mainstream water orders for CY 2025. However, given the limited available supply, requests for modifications to increase approved water order amounts will be evaluated on a case-by-case basis to ensure approved volumes do not collectively exceed the 113,940 AF of available supply. Arizona fifth priority and/or sixth priority entitlements will not be available for diversion in CY 2025.

Based upon the Shortage Condition determination, a review of the CY 2025 diversion estimate provided by BHC, and the information gathered during Reclamation's Part 417 consultation, I approve the diversion of up to 13,730 AF of Colorado River water during CY 2025 for use in BHC's service area. Incorporating BHC's anticipated injection volume, this approved diversion results in an estimated consumptive use of 9,149 AF.

Reclamation would like to highlight that, in accordance with the *Inadvertent Overrun and Payback Policy*,<sup>7</sup> **accumulations of inadvertent overruns are not permitted in CY 2025 and are suspended as long as a Shortage Condition is in effect.** To assist entitlement holders in monitoring their Colorado River water use to ensure they remain within available quantities, Reclamation will project CY 2025 diversions and consumptive use of Colorado River water during CY 2025 and will make these projections available daily on Reclamation's website<sup>8</sup>

---

<sup>3</sup> Referring to *Lower Basin Drought Contingency Operations*. Available at: <https://www.usbr.gov/lc/region/g4000/dcpdocs/Attachment-B-Exhibit-1-LB-Drought-Operations.pdf>.

<sup>4</sup> The P4(i) pool will receive 9.90% of the Arizona fourth priority Colorado River water available for CY 2025, calculated as 164,652 AF divided by 1,662,354 which is the difference between Arizona's 2,800,000 AF basic apportionment and the average historical consumptive use by Arizona first, second, and third priority users (1,137,646 AF). The average historical consumptive use by Arizona first, second, and third priority users is based on the four highest years of consumptive use during the five-year period from 2019-2023.

beginning in January 2025. Reclamation encourages Colorado River water entitlement holders to use the projections to adjust diversions to remain within their Reclamation-approved annual Colorado River water order.

Thank you for submitting BHC's diversion estimate for CY 2025. Should you have questions, please contact Jeremy Dodds, Water Accounting and Verification Group Manager, at (702) 293-8164 or [jdodds@usbr.gov](mailto:jdodds@usbr.gov).
