

Weekly Hydrologic Update

Current System Conditions (as of 8/2/2026)

Reservoir	Elevation (feet)	Change Since Last Week (feet)	Content 1,000 acre-feet (kaf)	Percent Full	Projected EOCY 2026 Elevation (feet) ¹	Change Since Previous 24-Month Study (feet)	7-Day Release (cubic feet per second)
Lake Powell	3,522.04	-0.86	5,376	23%	3,507.68	+2.66	7,800
Lake Mead	1,040.96	-0.26	7,044	27%	1,037.31	+0.48	9,200

- Colorado River total system contents: 18,904 kaf (32% of capacity)²
- Colorado River total system contents last year: 22,744 kaf (39% of capacity)

Upper Basin Conditions

- WY 2026 [Precipitation to Date](#): 21.13 inches (83% of normal), 83% last week
- [Current Snowpack](#): NA
- [Lake Powell Unregulated Inflow](#) – As of July 1, 2026
 - Forecasted Water Year 2026: 3,501 kaf (36% of normal), an increase of 10 kaf as compared to the previous forecast of 3,491 kaf (36% of normal)
 - Forecasted April-July 2026: 1,080 kaf (17% of normal), an increase of 30 kaf as compared to the previous forecast of 1,050 kaf (16% of normal)

Lower Basin Conditions

- [Lake Mead Basin](#)
 - WY 2026 [Precipitation to Date](#): 21.52 inches (108% of normal), 115% last week
 - [Current Snowpack](#): NA
 - 24-Month Study inflow projection: August inflow projection of 102 kaf³
 - Colorado Basin River Forecast Center: August inflow projection of 72 kaf (83% of average)⁴
- [Salt/Verde Basin](#)
 - WY 2026 [Precipitation to Date](#): 20.85 inches (98% of normal), 99% last week
 - [Current Snowpack](#): NA

Mexico Excess Flows

- 2026 Excess Flows: 1,976 acre-feet (January 1 to August 2, 2026)

- For Alamo and Painted Rock reservoir conditions, please visit <https://water.usace.army.mil/overview/spl>.

For questions concerning this report, please contact the River Operations group at bcoowaterops@usbr.gov.

¹ Projected values are based on the July 24-Month Study.

² The total system contents include Upper and Lower Colorado River reservoirs, less Lake Mead exclusive flood control space.

³ The 24-Month Study forecast uses a dataset based on average monthly intervening flow from 2021 to 2025, inclusive, to project future intervening flow into Lake Mead (5-year average).

⁴ The CBRFC's forecast of intervening flow between Lake Powell and Lake Mead provides a comparison to Reclamation's 5-year average. The CBRFC forecast uses a 30-year climatology record from 1991-2020.
