To: ColoradoRiverBasinStudy@usbr.gov

To whom it may concern,

This study should consider the removal of Lake Powell. It wastes millions of gallons of water annually through evaporation. It buries portions of the beautiful landscape of southern Utah. Scientists believe that eventually the lake will fill with the tons and tons of sediment brought by the Colorado and Green Rivers, anyway. Consider adopting an alternative strategy for utilizing the waters of the Colorado that doesn't waste nearly half of the volume of the lake to evaporation and ruin Glen Canyon. Build a nuclear power plant or a large solar farm outside Page, Arizona to replace the lost electrical power that the dam generated. Please remove Lake Powell!!

thank you for your consideration,
