Please do not take anymore water from farming, with the the climate chainging in the mid west we need to keep as much of our farm land working as possible. Ask (have) people in the south west to cut back on their outside use, but reducing or changing the size of their lawns. Planting with drought tolerant plants and other water saving plants. Make known any grants to remove salt cedars that suck up water from out waterways and replace them with native plants so that they aren't as likely to return. Require our freeways to be landscaped with plants that are found in the area they are going through, Pressure Cities to use plants that are native to that area for landscaping Offer iccentives for people to use gray water from their house to water outsidelawns and gardens. I know a lot of these are in place they just need to be better known to the population. jim george
