Option Name:

Missouri River Reuse Project with Extension to Rio Grande

Description of Option:

<p>This concept is the same as the Missouri River to Front Range Colorado concept, except it also includes an extension of the pipeline system to deliver 185,000 AFY to Smith Reservoir in the headwaters of the Rio Grande. This water would flow to New Mexico and help with potential shortfalls in that region and/or reduce diversion of the San Juan-Chama Project.</p>
--

Location: Describe location(s) where option could be implemented and other areas that the option would affect, if applicable. Attach a map, if applicable.

<p>Pipeline from Leavenworth, Kansas to location east of Denver. The pipeline south to Pueblo Reservoir. The pipeline further south and west to the headwaters of the Rio Grande.</p>

Quantity and Timing: Roughly quantify the range of the potential amount of water that the option could provide over the next 50 years and in what timeframe that amount could be available. If option could be implemented in phases, include quantity estimates associated with each phase. If known, specify any important seasonal (e.g., more water could be available in winter) and/or frequency (e.g., more water could likely be available during above-average hydrologic years) considerations. If known, describe any key assumptions made in order to quantify the potential amount.

<p>185,000 AFY can be conveyed in a 102-inch pipeline, which is a reasonable size and quantity for the potential future needs in this region.</p>

Additional Information

Technical Feasibility: Describe the maturity and feasibility of the concept/technology being proposed, and what research and/or technological development might first be needed.

Consistent with similar option that is focused on only deliveries to the Front Range of Colorado.

Costs: Provide cost and funding information, if available, including capital, operations, maintenance, repair, replacement, and any other costs and sources of funds (e.g., public, private, or both public and private). Identify what is and is not included in the provided cost numbers and provide references used for cost justification. Methodologies for calculating unit costs (e.g., \$/acre-foot or \$/million gallons) vary widely; therefore, do not provide unit costs without also providing the assumed capital and annual costs for the option, and the methodology used to calculate unit costs.

Consistent with similar option that is focused on only deliveries to the Front Range of Colorado.

Permitting: List the permits and/or approvals required and status of any permits and/or approvals received.

Consistent with similar option that is focused on only deliveries to the Front Range of Colorado.

Legal / Public Policy Considerations: Describe legal/public policy considerations associated with the option. Describe any agreements necessary for implementation and any potential water rights issues, if known.

Consistent with similar option that is focused on only deliveries to the Front Range of Colorado.

Implementation Risk / Uncertainty: Describe any aspects of the option that involves risk or uncertainty related to implementing the option.

Consistent with similar option that is focused on only deliveries to the Front Range of Colorado.

Reliability: Describe the anticipated reliability of the option and any known risks to supply or demand, such as: drought risk, water contamination risk, risk of infrastructure failure, etc.

Consistent with similar option that is focused on only deliveries to the Front Range of Colorado.

SUBMIT OPTION SUBMITTAL FORM BY:

1. EMAIL TO: COLORADORIVERBASINSTUDY@USBR.GOV

2. U.S. MAIL TO: BUREAU OF RECLAMATION, ATTENTION MS. PAM ADAMS, LC-2721, P.O. BOX 61470, BOULDER CITY, NV 89006-1470

3. FACSIMILE TO: 702-293-8418

Water Quality: Identify key water quality implications (salinity and other constituents) associated with the option in all of the locations the option may affect.

Consistent with similar option that is focused on only deliveries to the Front Range of Colorado.

Energy Needs: Describe, and quantify if known, the energy needs associated with the option. Include any energy required to obtain, treat, and deliver the water to the defined location at the defined quality.

Energy Required	Source(s) of Energy

Hydroelectric Energy Generation: Describe, and quantify if known, any anticipated increases or decreases in hydroelectric energy generation as a result of the option.

Location of Generation	Impact to Generation

Recreation: Describe any anticipated positive or negative effects on recreation.

Location(s)	Anticipate Benefits or Impacts

Environment: Describe any anticipated positive or negative effects on ecosystems within or outside of the Colorado River Basin.

Location(s)	Anticipated Benefits or Impacts

Socioeconomics: Describe anticipated positive or negative socioeconomic (social and economic factors) effects.

None Identified

Other Information: Provide other information as appropriate, including potential secondary benefits or considerations. Attach supporting documentation or references, if applicable.
