Option Name:

\_\_\_\_\_

Description of Option:

In 1948 when I was high school agriculture class we studied maps on how to get more water into the Colorado river. This was the plan the class came up with; Connect Green River to Snake River south of Jackson, WY Just wanted to pass this along to someone, I have thought about this for years. Thanks for listening  
JimWard

**Location:** Describe location(s) where option could be implemented and other areas that the option would affect, if applicable. Attach a map, if applicable.

\_\_\_\_\_

**Quantity and Timing:** Roughly quantify the range of the potential amount of water that the option could provide over the next 50 years and in what timeframe that amount could be available. If option could be implemented in phases, include quantity estimates associated with each phase. If known, specify any important seasonal (e.g., more water could be available in winter) and/or frequency (e.g., more water could likely be available during above-average hydrologic years) considerations. If known, describe any key assumptions made in order to quantify the potential amount.
