Weekly Fish and Water Operations Outlook

11/25/2025 – 12/1/2025

Water Project Operational Intent for Week

Current Central Valley Project (CVP) and State Water Project (SWP) operations are expected to be primarily governed by D-1641 standards such as required minimum Delta Outflow, the Rock Slough daily maximum salinity standard (250 Chlorides) and the maximum allowable Export to Inflow ratio of 0.65

Biological Context

Migrating LAD winter-run Chinook salmon catch at Knight's Landing and Sacramento seine sites continue to trigger Delta Cross Channel gate closure actions.

Forecasted Weather

Dry conditions with occasional winds and morning fog are expected for this week. Potential unsettled weather could return this weekend, but confidence is very low on details.

Tables

Table 1: Anticipated weekly operational ranges by tributary. Environmental and fish conditions are updated by respective watershed groups at varying intervals that may not coincide with the weekly range of Water Operations shown.
