Fish Passage after March 15th

- Fish passage analysis and assumptions:
  - Provide the minimum inflow available to meet passage criteria between March 15th to April 30th
  - Limit inflows to not exceed the total flow capacity of the Tule Canal

- Tule Canal flow capacity
  - Approximately 1,000 cfs between Agricultural Crossing #1 and just below Interstate 5

- Minimum inflow available for fish passage
  - Analysis indicated approximately 200 cfs to 300 cfs for reduced fish passage flows
  - Analysis used 200 cfs to be conservative, corresponding to a river stage of 17.7 ft at headworks

- Approach
  - Time series analysis using existing TUFLOW river stage at headworks and Tule Canal flow
  - Dual criteria must be met: 1) river stage > 17.7 ft, 2) Tule canal flow < 800 cfs
WY 2002 (Dry)

WY 2005 (Above Normal)
