

— BUREAU OF —
RECLAMATION

Salmon Monitoring Team (SaMT) Weekly Meeting

Teams call: 4/4/23 at 9:00 a.m.

Objective: Provide information to the Water Operations Management Team (WOMT), the U.S. Bureau of Reclamation (Reclamation) and California Department of Water Resources (DWR) on measures to reduce adverse effects from Delta operations of the Central Valley Project (CVP) and the State Water Project (SWP) on salmonids and green sturgeon. Final versions of the Proposed Action Assessment, and Fish and Water Operations Outlook will be posted to [Reclamation's Delta Monitoring Work Group](#) webpage, while final version of the Meeting Notes will be posted to Reclamation's [Salmon Monitoring Team](#) webpage. Meeting participants include representatives from: California Department of Fish and Wildlife (CDFW), DWR, National Marine Fisheries Service (NMFS), State Water Resources Control Board (SWRCB), Reclamation, and the U.S. Fish and Wildlife Service (USFWS).

Agenda Items

1. Introductions
2. Updates on Water Operations and Biological Conditions
3. Open Discussion on Species Status
4. Live-edit Assessments (Proposed Action Assessment and ITP Risk Assessment)
5. Additional Considerations/Other Topics
6. Next Meeting

Agenda Item 2. Updates on Water Operations and Biological Conditions

A minimal amount of precipitation is expected for the end of the week, favoring the Shasta Basin and Sierra Nevada regions. The Central Valley expects mostly dry conditions this week. Low nighttime temperatures continue, with a warming trend anticipated starting mid-week through the next several days.

Clear Creek releases from Whiskeytown Dam are currently at 200 cfs, returning to base flow releases now that the channel maintenance pulse flow is complete.

Sacramento River releases from Keswick Dam are currently at 3,250 cfs.

Sacramento River flows at Freeport are approximately 58,000 cfs and are expected to decrease slightly through the week.

San Joaquin River flows at Vernalis are approximately 34,000 cfs and expected to be out of the flood control operations by the end of the week.

Clifton Court Forebay (CCF) exports are currently at 6,000 cfs.

Feather River releases from Oroville Dam are currently at 10,000 cfs.

American River releases from Nimbus Dam are currently at 7,000 cfs.

Stanislaus River releases from Goodwin Dam are currently at 1,500 cfs. An additional fishery egg basket retrieval is expected to take place in the next 1-2 weeks.

The Delta outflow index is approximately 88,000 cfs. Flows are expected to decrease slightly through the week.

X2 is currently < 56 km (west of Martinez).

Jones Pumping Plant exports are currently at 3,500 cfs.

QWEST flow values are approximately +39,700 cfs and will remain in the positive range during the weeks ahead.

Rio Vista flows are approximately 56,000 cfs.

OMR daily value is currently +10,985 cfs.

The full moon on 4/5/23 will bring about the transition of the tidal cycle from a spring tide to a neap tide on 4/13/23.

For details on salvage that occurred in the past week please refer to the Operations Outlook, PA Assessment, and ITP Risk Assessment documents. Additionally, all salvage information can be found online at <https://filelib.wildlife.ca.gov/Public/salvage/>.

Actions Currently in Effect

- The Interim Operations Plan (IOP) is currently in effect resulting from a court order on 2/28/2023 and will determine operations for the remainder of calendar year 2023. Reclamation shall adopt the following provisions of the SWP ITP:
 - 8.5.2 Larval and Juvenile Delta Smelt Protection
 - 8.6.1 Winter-run Single-year Loss Threshold
 - 8.6.2 Early-season Natural Winter-run Chinook Salmon Discrete Daily Loss Threshold
 - 8.6.3 Mid- and Late-season Natural Winter-run Chinook Salmon Daily Loss Threshold
 - 8.6.4 Daily Spring-run Chinook Salmon Hatchery Surrogate Loss Threshold
 - 8.7 OMR Flexibility During Delta Excess Conditions
 - 8.8 End of OMR Management
- **Delta Cross Channel (DCC) Gate operations (PA 4.10.5.3):** Gates closed for the season on 11/28/22 to meet LTO Proposed Action. The gates will remain closed until May unless an opening is needed to meet D-1641 water quality requirements.

- **OMR Management Season (PA 4.10.5.10.1, COA 8.3.2):** Onset of OMR Management season began on 1/1/23 due to the exceedance of the 5% threshold for the winter-run Chinook salmon population presence within the Delta. Old and Middle River (OMR) flows cannot be more negative than -5,000 cfs on a 14-day average. Additional restrictions and changes to operations may be required per the PA and the CDFW Incidental Take Permit (ITP- COA 8.3.2).
- **ITP Winter-run Single-year Loss Threshold (COA 8.6.1):** DWR will operate Banks Pumping Plant consistent with Condition of Approval 8.6.1 of the ITP. These values are based on the juvenile production estimate (JPE) of 49,924 fish.
 - The ITP natural-origin Winter-run Single-year Loss Threshold for this year is loss of unclipped length-at-date winter-run Chinook salmon from the CVP and SWP greater than or equal to 1.17% of the winter-run Chinook salmon JPE (loss \geq 584.11). If 50% of the threshold is exceeded (loss \geq 292.06), the required response is to reduce SWP exports by its proportional share, according to the coordinated operations agreement (COA), that would be required to reach a 14-day average OMR of -3,500 cfs. If 75% of this threshold is exceeded (loss \geq 438.08), the required response is to reduce SWP exports by its proportional share, according to the COA, that would be required to reach a 14-day average OMR of -2,500 cfs.
 - The ITP hatchery-origin Chinook salmon Single-year Loss Threshold for this year is loss of clipped length-at-date winter-run Chinook salmon from the CVP and SWP greater than or equal to 0.12% of the winter-run Chinook salmon hatchery-origin JPE (loss \geq 229.15). If 50% of the threshold is exceeded (loss \geq 114.58), the required response is to reduce SWP exports by its proportional share, according to the coordinated operations agreement (COA), that would be required to reach a 14-day average OMR of -3,500 cfs. If 75% of this threshold is exceeded (loss \geq 171.86), the required response is to reduce SWP exports by its proportional share, according to the COA, that would be required to reach a 14-day average OMR of -2,500 cfs.
- **ITP Mid- and Late-season Natural Winter-run Chinook Salmon Daily Loss Threshold (COA 8.6.3):** DWR will operate Banks Pumping Plant consistent with Condition of Approval 8.6.3 of the ITP. The ITP Daily Loss Threshold for April is loss of older juvenile Chinook salmon from CVP and SWP greater than 0.00507% of the winter-run Chinook salmon JPE (loss $>$ 2.53). If the loss threshold is exceeded, the required response is to reduce SWP exports by its proportional share, according to the COA, that would be required to reach an OMR of no more negative than -3,500 cfs for five consecutive days.
 - **Amendment to COA 8.6.3 in effect as of 1/20/2023:** In water year 2023, Permittee shall restrict exports in response to the initial length-at-date

identification of natural older juvenile Chinook salmon and the thresholds described above. If genetic analysis of an individual natural older juvenile Chinook salmon observed in salvage at the SWP or CVP indicates that it is not CHNWR, that individual shall not count toward the daily loss threshold and continued export restrictions under this Condition of Approval are not required if the daily loss threshold has consequently not been met. All genetic analyses shall be conducted using CDFW approved genetic methods.

- **ITP Daily Spring-Run Chinook Salmon Hatchery Surrogate Loss Threshold (COA 8.6.4):** From 2/1/2022 – 6/30/2022, DWR will operate Banks Pumping Plant consistent with Condition of Approval 8.6.4 of the ITP. The ITP Hatchery Surrogate Loss Threshold for WY 2023 will include two fall-run release groups from Coleman National Fish Hatchery (CNFH), two spring-run release groups from Feather River Fish Hatchery (FRFH) and one fall-run release group from Nimbus Fish Hatchery (NFH). If cumulative loss from CVP and SWP is greater than 0.25% for any release group (FRFH Group 1: loss >1,828.64; FRFH Group 2: loss > 1,821.47; FRFH Group 3: loss > NA, CNFH Group 1: loss > 1,002.24, NFH Group 1: loss > NA), the required response is to reduce SWP exports by its proportional share, according to the COA, that would be required to reach an OMR of -3,500 cfs for five consecutive days.
- **ITP Export Curtailments for Spring Outflow (COA 8.17):** From 4/1/2023 – 5/31/2023, DWR will reduce exports to achieve the SWP proportional share of export reductions established by the ratio of Vernalis flow (cfs) to combined CVP and SWP exports, scaled by water year type, to provide incidental spring outflow. In an above normal or wet year, the ratio of Vernalis flow to CVP and SWP combined exports shall be 4:1. In wet years, SWP export curtailments required by this Condition of Approval for spring outflow in April and May is limited to 150 TAF. However, DWR will not be required to restrict operations if:
 - If the three-day average Delta outflow is greater than 44,500 cfs, then the SWP shall not be controlled by this COA until the flows drop below 44,500 cfs on a three-day average.
 - Exports are below the minimum health and safety exports of 600 cfs.

Weekly Fish and Water Operations Outlook, Current Operations

SaMT reviewed and updated the Outlook document. The updated Outlook document will be distributed to the SaMT via email by close of business (COB) 4/5/23.

SaMT discussed Fish Monitoring Gear Efficiency/Disruptions as addressed within the Operations Outlook and updated accordingly.

SaMT Estimates of Fish Distribution

SaMT estimates of the current distribution of listed Chinook salmon and CCV steelhead, as a percentage of each population, are based on recent monitoring data and historical migration timing patterns. Estimates this week are based on YOY winter-run and YOY spring-run as well as natural origin steelhead at the real-time monitoring locations. These estimates are reported in the final Assessment document, available on the [Delta Monitoring Workgroup](#) webpage.

Location	Yet to Enter Delta	In the Delta	Exited the Delta
Young-of-year (YOY) winter-run Chinook salmon	Current: 1-2% Last week: 1-3%	Current: 38-54% Last week: 52-69%	Current: 45-60% Last week: 30-45%
YOY spring-run Chinook salmon	Current: 10-20% Last week: 10-30%	Current: 65-80% Last week: 65-80%	Current: 10-15% Last week: 5-10%
YOY hatchery winter-run Chinook salmon	Current: 25-35% Last week: 35-55%	Current: 25-50% Last week: 35-45%	Current: 30-40% Last week: 10-20%
Natural origin steelhead	Current: 15-45% Last week: 20-50%	Current: 25-45% Last week: 25-45%	Current: 30-40% Last week: 25-35%

Agenda Item 3. Open Discussion on Species Status

Salvage Update

Fall-run-sized Chinook salmon were salvaged only at the federal facility during the reporting period of 3/27/23 – 4/2/23.

Spring-run-sized, clipped and unclipped Chinook salmon were salvaged only at the federal facility. The SWP salvaged two spring-run-sized, clipped Chinook salmon.

One wild Steelhead was observed at the federal facility with a loss of 2.72 fish. The seasonal salvage total is 332 fish, and seasonal loss is 1,015.16.

No hatchery Steelhead were salvaged during the reporting period. The seasonal salvage total for hatchery Steelhead is 1,349 fish, and seasonal loss is 3,637.29 fish.

1 natural-origin LAD winter-run Chinook salmon was accidentally killed on 4/3/2023 with a loss of 2.88. An additional +1 will be added to the total loss due to the accidental kill, increasing the loss to 3.88.

Operations

The CVP facility reported one missed count on 3/27/23 due to operator error.

Agenda Item 4. Live edit Assessments

Proposed Action Assessment

SaMT reviewed and updated the current week's Proposed Action Assessment document. The updated Proposed Action Assessment will be distributed to the SaMT via email by COB 4/5/23. The final assessment will be posted to [Reclamation's Delta Monitoring Workgroup](#) webpage.

ITP Risk Assessment

SaMT discussed the ITP Risk Assessment document. The updated draft ITP Risk Assessment will be distributed via email by COB 4/4/23 for review by SaMT members with comments due COB Thursday 4/6/23. The ITP Risk Assessment will be finalized by COB Friday 4/7/23 and can be found at [CDFW's Water Project Operations](#) webpage.

Agenda Item 5. Additional Considerations/Other Topics

N/A

Agenda Item 6. Next Meeting

The next SaMT Meeting is scheduled for Tuesday, 4/11/23, immediately following the Joint Operations & Outlook 9 a.m. meeting.

Action Item: Virginia Afentoulis, CDFW, was asked by SaMT members to contact the Tracy Fish Collection Facility for additional details regarding the reduced count reported on 3/27/23 due to operator error, as well as a winter-run-sized fish that was accidentally euthanized due to operator error.
