Peak operating season: Although the peak operating season is from Memorial Day through Labor Day, Lake Berryessa hosts many visitors throughout the year.

Disruption in visitation: Although there have been periodic fires during the summer, none have had an impact on the lake's visitation. The most recent disruption in visitation was due to a seven year drought which occurred from 1987 through 1994 at which time visitation decreased. There were also a couple of years of large fluctuations surrounding 2002/2003 and may be attributed in part to national concerns on terrorism. See the chart on the following page outlining the past 25 years of visitation at Lake Berryessa:
