Erin,

Following are a couple of comments on the December 31, 2014, Long-Term Plan for Protecting Late Summer Adult Salmon in the Lower Klamath River.

Page 12, section 2.6.4, 2014 Implementation and Outcome.

Might be worth adding that additional flows were released from Iron Gate Dam in October 2014.

Page 21, section 6.2.4, Summary of Aggregate 2012-2014 Augmentation Impacts to Water Supply and Power Operations

The statement that "...significant limitation on releases from Keswick Reservoir to conserve the CVP in Shasta Reservoir reduced water deliveries in general" seems inconsistent with the later statement that "[i]t is unlikely that any portion of the release of an additional 100,000 a-f from Keswick Reservoir would have been available to provide water for irrigation under the CVP water service contracts." Clarification may be helpful.

Thanks, Don
