October 2020 Boca Dam Construction Photos

View of completed Boca Dam Reservoir Road and embankment.

Construction of stability berm in progress

Construction of filter zones at Boca Dam; filter zones layer filter sand against existing embankment, followed by drain rock. The filter zone is then encapsulated with in-reservoir-borrow material.

Concrete barrier placement using slip form method; this method places concrete into a continuously moving form.

Construction of concrete barrier in progress

Construction of dam embankment and filter zones in progress (remove period after progress).
