I retired from SRP a few years ago and was previously responsible for schedule control of the SO2 Scrubbers installed in the late 90's. It would be devastating to shut down NGS because it's a MAJOR source of revenue for the Navajo Nation! Additionally, any air pollution (haze) in the Grand Canyon only comes from NGS a few days each year because prevailing winds blow from west to east and NGS is east of the Grand Canyon. (The Grand Canyon haze mostly comes from California). Please keep this multi-Billion dollar facility in operation!
