FINAL IRRIGABLE AREA SURVEY

This acreage tabulation is based on land classification surveys made under the provisions of the Federal Reclamation laws and becomes effective at the beginning of the first year of the construction repayment period for the block (January 1, 1985)

1 --All units in the block, unless designated otherwise, are special water delivery units. A special water delivery unit is a unit of land normally served by a single turnout in which all or a portion of the unit is classified for sprinkler irrigation only or for any method other than the method of irrigation normally used in a unit.

2 --Lands in Class 6 are regarded as nonirrigable.

3.--High lands were not delineated in the block. Arable lands located at a higher elevation than the turnout or measuring device are included in the irrigable area because of the designation of all units as special water delivery units.

The Final Irrigable Areas and Land Repayment classes of each unit in Irrigation Block 461 as established and fixed by my certificate of 3785 are shown on the following 2 sheets of this Irrigable Area Map.
