The General Map sheets show in detail from the irrigated area of each farm unit by classes of land and the portions within each farm unit required for rights-of-way as designated as Class B (temporarily abandoned), Class A (irrigated) and "Right." The land slopes indicated in the illustrations on the maps were designated and established in accordance with the Regional Director, Region 2 Bureau of Reclamation, for determination of the irrigability of the area and are not intended to be temporarily inexact because of roughness of conditions. Lands in Class B are shaded on unirrigated, Lands designated as "Right" are shaded on buildings shown beyond the proposed limits of the distribution system being provided for the irrigation district. The States of Washington and appropriate counties have been outlined on the maps of the United States, indicating changes in elevation and rights-of-way for public highways and roads under their jurisdiction. To the extent to which the data are practicable to do so, these data have been identified and shown on this record. In the last year of the development period for the block, an assessment of the irrigated District will be issued by the Secretary of the Interior authorizing and fixing the irrigated areas and the classification of each farm unit in the blocks for purposes of water service charges and project construction requirements as provided for in the repayment contract of October 9, 1969, as amended, between the United States of America and the Survey Columbia Water Irrigation District, recorded in Grant County, Washington, in invoices of Columbia River Document, page 481/18.

In considering these observations, investigations and studies were made of the lands in the block and the present on a whole with the object of determining the area, shape and boundaries of the various farm units in the block, having in mind the requirements of the Columbia Basin Project Act (75 Stat. 871 et al. and Chapter 275, Laws of Washington, 1959, as amended), one of the the state is established in accordance with the Secretary. Based on these studies and investigations and all available information brought up from the filing of the farm unit plan, I find that the units as far as determined and shown are sufficient in number for the support of an adult family of four at a suitable living level and have appropriate shape and boundaries, having in mind the character of the irrigation system, and all other factors that are relevant to the determination of the area and boundaries of the farm units. Accordingly, acting pursuant to the authority granted to me by the Secretary of the Interior in Section 15 of the Act of April 26, 1954, and Acting as Commissioner of the Columbia Basin Project, I hereby approve the farm unit plan of the Columbia Basin Project for the area described as the delineated area of the Columbia River Irrigation District in the appended plan filed, September 9, 1969 at the United States Department of the Interior, Bureau of Reclamation, Washington, D.C., and recorded in the office of the Secretary of the Interior. I also approve the form of the project plan of the Columbia Basin Project for the area described as the delineated area of the Columbia River Irrigation District in the appended plan filed, September 9, 1969, as recorded in the office of the Secretary of the Interior.

I hereby certify that this return of irrigated area is true and correct and that it is the result of cooperative and joint efforts of the Columbia Basin Project and the land owners for the purpose of water service charges and project construction requirements as provided for in the repayment contract of October 9, 1969, as amended, between the United States of America and the Survey Columbia Water Irrigation District, recorded in Grant County, Washington, in invoices of Columbia River Documents, page 481/18.

T.J. Norton
