Greetings EP workgroup members

At our last meeting, we decided to meet again after the RTT meeting next week (February 8). James has been busy and attached are the updated tables (please read his e-mail below) that will assist us in completing our tasks. I believe that our only remaining tasks are to ensure the bookends make sense, so please be prepared to discuss them when we meet.

Thanks again for the time you have spent on this.

Chuck

Subject: Entiat with 09 Upper Bookends

Chuck,

Attached is the most recent version of the EP/RTTBS tables – As requested, I added the 09 upper bookends to the Entiat table where we have them. There is a new tab in the workbook called something like Bookend Color Key – unfortunately we only have 09 bookends for the LFs that were identified in the EP tables at the time, leaving a lot of gaps, and the group changed the lower bookend from where it once was on many of LFs/ecological concerns that are the same.

- I was only able to keep one whole set of lower and upper bookends (marked in green);
- A number of the lower bookends moved in a way that I could still take the % change from the 09 book ends (marked in blue);
- A few of the lower bookends moved in a way that taking the % change would put the upper bookend above 100% - these I used 99% as a place holder (marked in brown)
- Ecological concerns without a corresponding LF in the 09 table are marked in orange.

Theo and I will be working on the other tables between now and Monday.
