

Notes and Charts:

Pie and bar charts were generated from estimates of the habitat condition of key limiting factors associated with habitat actions planned to be completed for the FCRRS BICP through 2012. The pie and bar charts represent conditions for the sum of the FCRRS BICP (2007-2012). Do not include conditions associated with habitat actions completed by other parties within this time period, and, therefore, may not represent the status of these key limiting factors for other FCRRS BICP purposes.

Details:

Steelhead bars and values of Overall Function (%) represent differences between functioning (green) and non-functioning (red) key limiting factors aggregated for each assessment unit.

Size of each pie is relative to the Intrinsic Potential of each Assessment Unit within the population as defined for Recovery Plans by the Interior Columbia Basin Technical Recovery Team. The intrinsic potential weighting factor (Watershed Weight) is denoted below each pie.

Pie slices and values indicate the relative proportion of each limiting factor that comprises the non-functioning (red) % of the bar. Zero values indicate a limiting factor was identified for FCRRS BICP purposes, but habitat condition values have not yet been assigned.
