These are the Biological Notes from the Upper Grande Ronde Expert Panel Look Forward session, conducted in LaGrande, OR from 3/8/2016 to 3/10/2016. Notes are specific to Chinook. Raw notes were collected during Panel discussions, and later checked for typographical errors and for consistency with supporting tables. This spreadsheet also contains revisions look back uplifts and rationale in response to Panel review comments and revisions during the look forward meeting.

"EP table" references are to spreadsheets developed and compiled during the session. This spreadsheet references both look back and look forward calculation spreadsheets (tables). These two files are named the following:

Look Back Calculation Table:

UGRCC_EP_2012-15_LookBack_CalcSpreadsheet_3-29-16.xlsx

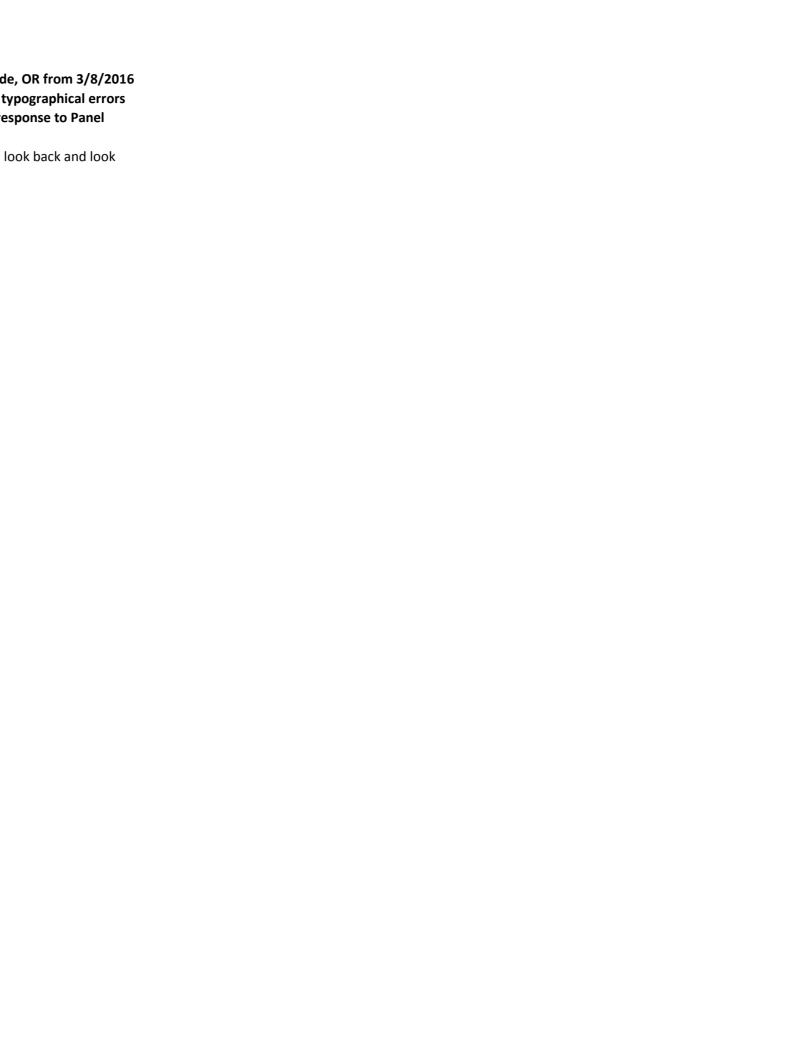

Look Forward Calculation Table:

UGRCC_EP_2016-18_LookForward_CalcSpreadsheet_3-29-16.xlsx

Primary biological note taker: Kim Gould, Cardno, Inc.

Key:

Bracketing in rationale columns demarks content added during the QA process.

See EP's table for CCCLB. Panel considered CCLF. Project Phane 1 (66) plants at wood site: 1,000 lineal feet and from Exp (11,119 plants and feeting along 1.13 miles). No woody regeration yet in exclusion ferricing areas and 2 CBP projects (included due to action agency means. "Bed contract to Assion Cauthy in PASTS. List to Model Watershelf Was it completed?). No functional effect yet. Little Catherine Wavershelf 28/MIAC Creek/Prohiply Ferricing and Petraling consisted of 18.6 acres of praint effecting, planting, accustion Iossume 1.2 miles, 4.35 feet on each side). See EP's table of projects and percentage of current function. Plantings are too young, so no updiff at this time. Notice Court Phase 3 in load Fed. | 3 | | 0 No adjustment. | 1.9 | | Using 20% proration in calculation table gives 1.9% uplift. | (| 0 | | Remove CCC38 (wrong location). Calculations table has projects and prorations: CC44 Phase 4 2016, Hall Ranch 2017 (side channel and mainstem), Southern Cross. No functional change for 2018. | | | rorated for 2033 vegetation growth. | 61 | 65 | 67 7 | 15 | Hall Ranch & CC44 projects would address about 1/2 of reach. Slow growth makes 2018 Hi bookend difficult to achieve |
| Snake River Spring/Summ r Chinook | | Catherine Creek (Swackhammer Diversion to N. & S Forks) | 4.2: Riparian Condition: LWD Recruitment | 6.50% | | GI | | 6 | | No percentage change for same reasons as mentioned for limiting factor 4.1 | | | 0 No adjustment. | 1 | 1 1 | Using 10% proration in calculation table gives 1% uplift. | | 0 | | Calculations table has projects and prorations: CC44 Phase 4 2016, Hall Ranch 2017 (side channel and mainstem), Southern Cross. No functional change for 2018. | | 1.6 U | Ised half of limiting factor 4.1 proration. | 60 | 60 | 61 7 | 0 | Estimate considers long term recruitment improvement from 4.1 LF projects. |
| Snake River Spring/Summ r Chinook | | (Swackhammer Diversion to N. & S Forks) | 5.1: Peripheral and Transitional Habitats: Side Channel and Wetland Conditions | 15.00% | | 61 | 5 | 71 | | See EF's table. Rated value based on current percentage of Properly Functioning Condition rather than using portion of total length treated. For places 1-3 of CCEA project (See Insinging Earlo Z project description) side channel work was contained by landowner. Fish use of Safe Channel ER was seen insensedated, "Place Safe Safe Safe Safe Safe Safe Safe Saf | | | | | | | (| 16.9 | | Calculations table has 4 projects and prorations. Hall is unconfined, so 1:1 main to side channel benefit in mediate benefit in 2018 period is 16.9% uplift for 2018 and 2033. | | 16.9 | | 66 | 70 | 66 7 | altered; naturally constrained upstream | Estimate based on CC44 project - 5.5 miles restoration potential. Little benefit from water transactions until channels are formed. |
| Snake River Spring/Summ r Chinook | Catherine CCC3B e Creek | Catherine Creek | 5.2: Peripheral and Transitional Habitats: Floodplain Condition | 10.00% | | 61 | 5 | 71 | | See EP's table. For CC44 project phases 1-3, rated value based on current percentage of Proporty Functioning Condition rather than using the portion of fostal length treater. Phase 1 (10), Phase 2 alread enhanced low spots in floodplain (DN), and Phase 3: oversized for landowner concern, so only activated at higher flows, which reduces biological value, but side channels increase floodplain complexity (10%). Uplift was determined to be 6.9%. | | | | | | | (| 9.2 | | Calculations table is based on limiting factor 5.1: removed CC44. Adjusted length for main channel (same as riparian length). Same uplift for both time periods – 9.2%. | | 9.2 | | 66 | 70 | 66 7 | | Conservative estimate due to uncertain designs, etc. |
| Snake River Spring/Summ r Chinook | Catherine CCC3B e Creek | Middle Catherine Creek (Swackhammer Diversion to N. & S Forks) | | 10.00% | | 61 | | 63. | | Panel considered CC44 phases 1-3, with protest feators of 8, 10, and 60 percent, respectively, Rated valued on current percentage of Properly Functioning Condition or portion of total length treated. Phase 1: bank stability and graves sorting 800 feet spread over almost 2 miles (8% factor). Phase 2, including roughened channel had a prorate factor of 10%. Phase 2 considered width to depth ratio improvement. Tight radius pook should be odded improvement. 155 miles were rested, resulting in an uplift of 3.5%. | | | | | | | , | 9.6 | | Same projects as for limiting factor 5.1 in calculations table. Prorated based on form changes expected by 2018, resulting in 9.6% change expected. | | 9.6 S | ame as for 2018 | 62 | 70 | 63 7 | 75 | Conservative estimates due to uncertain designs, etc. |
| Snake River Spring/Surmn r Chinook | | Catherine Creek | 6.2: Channel Structure and Form: Instream Structural Complexity | 15.00% | | 61 | | 66. | | Pamel considered CC64 phases 1-3. Phase 1 (2013) was wood placement and side channels only, on Kerble, Pife, and Smith properties (69-511) large wood complexes, 802 feet of main channel, 546 feet of side channel including actives), 802 feet on the channel of the properties of the channel channels, 466 feet of disciplination of the channels of the channels of the channels, 466 feet of 147.00 feet at fivile part of Pife. 20 feet good complexes. 1 side channels built (212 feet long), 2 droves built and roughned channel at new intake. Phase 3 in 2015 was on Smith property and is still underway; 56 owd structures, 666 mile., 1,113 feet of side channel, and 5 sixtees. Built place are receipting, so recalculation with all wood phases lumped results in 2 miles (2,000 meters) tool treatment (1,772 [Phase and Phase 2); Phase 3 in vers 100 pieces to 100 meters, which we lower the 27 pieces per 100 and Phase 2); Phase 3 in vers 100 pieces to 100 meters, which we low the 122 pieces per 100 pieces were in the channel via being embeded. Note that some (e.g. Phase 2); large wood was for bank pieces were in the channel via being embeded. Note that some (e.g. Phase 2) array wood was for bank shall built on the channel via being embeded. Note that some (e.g. Phase 2); large wood was for bank shall built on the process of the channel was seen to the channel was seen or of a fish habitat aim focus. Side channel wood additions benefit winter rearing more than summer rearing. But it excludated uptil treased high to (P.), additional promotion to concern the sum of a fish channel was determined to be 6.91 as at affected Properly Functioning Condition (50% of pieces). Final total uptilt was determined to be 6.91 | e e | | | | | | , | 20.2 | | Calculations table has 4 projects. Proration based on percentage of Properly Functioning Condition (27 pieces per 100 m). Provincing Condition (27 pieces per 100 m). 20.2% uplift in 2018 and 2033. | | 20.2 S | ame as for 2018 | 65 | 70 | 65 7 | 5 | 7 of 9 miles treated; conservative estimate due to uncertainty of design |
| Snake River Spring/Summ r Chinook | | Catherine Creek | 7.2: Sediment Conditions: Increased Sediment Quantity | 5.00% | | 61 | | 68. | | See EPs table and other limiting factor discussion notes. Rated values based on current percentage of Properly functioning Condition. Project CC44 projects considered: Phase 1 bank stability work (LIONs of length stabilities) place 2: 80% of project length stabilities (Phase 3: 80% of project length stabilities) Uplift was calculated at 8.6%. | | 8.6 | 6 See calculations table changes. | | 9.8 | See calculations table changes. | | 4.1 | | Low spawning habitat quality above Ricker (embedded). Planting projects: no benefit in 2018, but instream projects will aid sorting of substrates. In 2018 panel expects 4.1% uplift and in 2033, 6.4% uplift. | | 6.4 | | 61 | 65 | 63 7 | 15 | conservative estimate due to uncertain designs |
| Snake River Spring/Summ r Chinook | Catherine CCC3B e Creek | Middle Catherine Creek (Swackhammer Diversion to N. & S Forks) | | 10.00% | | 61 | | 6 | | 'She of days from July 20 to Aug 11 are in exceedance of 20 degrees. Obserd on Childhe dials), it is coole upsterm of this securement unit, but there is a bit of solar radiation warming as water flows downstream to this assessment unit. No uplift identified. | r m | | | | | | | 0 | 0 | No benefit from flow projects, as per Look Back stationale, but riparfan projects and channel form changes will benefit temperature, especially from florks down to Union. 3.5 degrees? Gwould be espected if all 14 miles were treated from C. Justice results), so 10.5 degree expected from these actions. Calculations table yields 0% change in 2018. | | | 033 calculations table proration for riparian egetation growth indicates 0.5% uplift. | 60.1 | 65 | 61 7 | 'S upper 2/3 in good condition | |
