

Attendees:

Mike Benedict

Hugh

Mattie

Taylor

Notes:

- Review of alts primarily
  - Based
  - Alt 1 – increased demands
  - Alt 2 – increased conservation
  - Alt 3 – storage (3 reservoir changes)
  - Reservoirs
    - GP prelim results show that increasing storage does not really benefit FID – mostly because there are not any shortages. This could in part be due to the lack of observed data.
  - Flows
    - Min Flow at Tucker (Q4 is JAS)
    - Implementing alts cause shortages to drop roughly 10cfs (20% or so in the MW/D with increased demands) at Tucker
    -
