

Andrew Koehler, Ph.D.

"Simultaneous adsorption and destruction of PFAS in brackish groundwater using a UV-C photocatalytic reactor"

Dr. Andrew Koehler is an R&D Engineer at Coflux Purification, a startup specializing in concentrating and destroying PFAS in water and wastewater. He received his PhD from the Colorado School of Mines in Environmental Engineering, where his research focused on PFAS destruction, heterogeneous catalysis, and clean fuels. Andrew was an NREL Energy Fellow at the National Renewable Energy Laboratory and consulted on PFAS policy and renewable energy policy at AJW, inc. Andrew was also a Fulbright Fellow and a National Science Foundation Graduate Research Fellow.
