

Stuart Norton, Ph.D.

Presentation topic: New Mexico Brackish Groundwater Desalination Demonstration System

Dr. Norton, owner and program director of Indewater LLC, has more than 25 years of experience in water resources program management, regulatory coordination, community engagement, and the management of complex water resource projects, including extensive work across New Mexico. His research and project experience focuses on alternative water supply systems, including desalination, managed aquifer recharge (MAR), including direct and indirect artificial recharge, and non-potable reuse and indirect potable reuse projects. Indewater is providing overall technical and administrative leadership, overseeing system integration, technical design and optimization, project management, and coordination and communication among all project partners on the New Mexico Statewide Mobile Brackish Groundwater Desalination Demonstration Pilot Treatment System.
