WaterSMART - Data Visualization Tool

Securing a Sustainable Water Future

Over the last seven years, the WaterSMART Program has enabled Interior and its partners to act in response to near-term and immediate water shortages, and also to plan for longer-term needs.

Since 2010, Reclamation's WaterSMART Program has provided over \$430 million in funding for over 550 water resources planning and on-the ground improvement projects in the western U.S.

By building on the success of **WaterSMART**, Interior will continue providing leadership and assistance to partner states, tribes, regional and local governments, and conservation organizations as a responsible steward of the Nation's natural resources.

WaterSMART Funding Opportunities

WaterSMART Program funding opportunities are offered annually. Please visit the annual calendar for available WaterSMART funding
