

Closeout Document: X3318

Team Lead: Michael Horn

This project was one of two projects that was proposed to explore the impacts of Quagga mussels on water quality in Reclamation waters. The other project was X3997, the impact of Quagga mussel introduction on POM drift. X3318 was funded for FY2011 but nothing was ever done with the project and the project had all funds deobligated on 8/10/2011. IT has a second year of funding proposed, but the project was not funded for FY12.
