

# Wall Gage Creator

*Tony L. Wahl, Bureau of Reclamation, Denver, Colorado*

---

[Wall Gage Creator](#) is a stand-alone program that makes the wall gage creation module of WinFlume available as a separate program, for use with any hydraulic structure having a rating table or rating equation. **Version 1.0** was released on **October 17, 2008**.

Wall Gage Creator can load rating table data from a text file or generate rating table points from a power-curve equation. The program is an excellent companion to the [USBRWeir](#) calculator spreadsheet. It is also very useful for generating staff gages for compound weirs and other structures with unusual rating equations. Simply use a spreadsheet to generate rating table points from any complex equation, then cut-and-paste to a text file for import into Wall Gage Creator.

Wall gage images can be printed to paper or [PDF files](#), using 3rd-party PDF print driver utilities, such as: Adobe Acrobat, PDF Creator, TinyPDF, CutePDF, PDF995, etc. Wall gages can be fabricated by many sign shops and trophy stores, or visit the list of on-line links to [wall-gage fabricators](#).

## Software Setup Kit

**Download [Wall Gage Creator](#)** - This setup kit is intended for Windows 95 and newer systems.

## E-Mail Notification of Updates

**Notification of updates to this program will be provided on the [USBRWeir Notification List](#).** To join the list, send a blank e-mail to [join-usbrweir@listserver.usbr.gov](mailto:join-usbrweir@listserver.usbr.gov)
