

Pipeline Coatings Final Report

The Research office provided a small amount of funds for seed money to develop partners to evaluate pipeline coatings. The Research office said there would be \$100,000 available if we could get research partners. We had a meeting with Water Research Foundation in May 2013. With all the similarity in goals between Reclamation and WRF, they did not seem overly thrilled to conduct this pipe coatings research together. We have not heard back from them since the meeting.

Due to the inability to find research partners this research was not funded. In 2014, this proposal was not submitted due to budget constraints within the Research office.
