Area and Capacity Tables

**U.S. Department of the Interior
Bureau of Reclamation
Technical Service Center
Denver, Colorado**

September 2012

The tables for Lake Isabel were generated by means of the area-capacity program ACAP using the least squares method of curve fitting developed by the Bureau of Reclamation Technical Service Center. This program computes area at 1.0-, 0.1-, and 0.01-foot increments by linear interpolation between basic data contours. Area equations are, $AREA = A2 + (X)(A3+A3)$. The respective capacities and capacity equations are then obtained by integration of the area equations. The initial capacity equation is tested over successive intervals to check whether it fits within an allowable error term. At the next interval beyond, a new capacity equation (integrated from the basic area equation over that interval) begins testing the fit until it too exceeds the error term. The capacity curve thus becomes a series of curves, each fitting a certain region of data. The final area equations are obtained by differentiation of the capacity equations. Capacity equations are of the form $CAPACITY = A1 + A2(X) + A3X^2$ where X is the elevation above an elevation base. The capacity equation coefficients for the reservoir are shown below ($\epsilon = 0.000001$).

LAKE ISABEL 2012 AREA-CAPACITY TABLES

EQUATION NUMBER	ELEVATION BASE	CAPACITY BASE	COEFFICIENT A1(INTERCEPT)	COEFFICIENT A2(1ST TERM)	COEFFICIENT A3(2ND TERM)

The Lake Isabel survey in September 2012 used the contour method to obtain the basic data for these tables. Close interval profiles of the underwater portion of the reservoir were collected by standard surveying techniques using a global positioning system (GPS) and echo sounder. The above-water portion was determined from digitized USDA aerial images of the reservoir water surface at time of flight and USGS quad controls along with GPS topographic shots. The ACAP program interpolated the presented results from elevation 8,405.0 through 8,444.0. All data for these tables are tied to the North American Vertical Datum of 1988 (NAVD88). As of September 2012 the current gage is set at 3.29 feet at spillway crest elevation 8,477.7. All data for these tables are tied to the project vertical datum that is 2.0 higher than the North American Vertical Datum of 1988 (NAVD88). The 2012 survey and the reduction of the data were completed by personnel from Reclamation's Sedimentation and River Hydraulics Group of the Technical Service Center in Denver, Colorado under the direction of Mr. Kent Collins, PE.
