# Corrosion Webinar: GIS Dashboards for Hazardous Materials, Coatings, and Corrosion Protection

**Thursday, February 1st, 11:30am-12:30pm (MT)**

Two recent WaterSMART Internal Applied Science projects have created interactive, user-friendly geographic information system (GIS) databases which expand the availability of critical cathodic protection, coatings inspection, and hazardous materials survey data. The Cathodic Protection Dashboard includes information on test stations, rectifiers, and junction boxes for structures such as pipelines and gates. The Coatings Inspections and Hazardous Materials Surveys Dashboard allows users to interact with coatings inspection and hazardous materials survey historical data, including reports and laboratory data. Both dashboards were created to boost Reclamation's data management, maintenance monitoring, and technical support.

This webinar will give an in-depth discussion of these dashboard tools. Please join us to learn about where to access these resources, how to interact with them, and what purposes they can be used for. The presentation portion will be about 45 minutes, followed by time for questions and comments. Please share this flyer with interested colleagues!

**The link to join the webinar will be emailed prior to the event.**

To join the email list, please contact Avery Schilt (aschilt@usbr.gov).

**Technical Service Center, Materials and Corrosion Laboratory presenter**
