

**GCD Technical Work Group
June 30 – July 1, 2004, Meeting**

Action Items

No.	Item	Status
1	(Continuing) Bill Persons and GCMRC will provide an update on the metrics and management objectives for the Lee's Ferry trout fishery at the June/July 2004 meeting and lead the TWG to looking at the bigger issue (updating management objectives).	
2	(Continuing) Mary Barger will provide updates on the HBC Genetics Management Plan at upcoming TWG meetings	Update: Bob Muth says it's a work in progress. It's on their schedule but no time frame at this time – probably six months out.
3	(Continuing) Glen Knowles will track the status of the Willow Beach Genetics Assessment and provide copies of that report upon completion.	Update: Work continues. Will have something for the January meeting.
4	(Continuing) GCMRC (Ted Melis) will endeavor to provide copies of the HBC Genetics report being done by Mike and Marlis Douglas. GCMRC will provide copies of the draft report by July 31, 2004, or sooner, in order to present to the AMWG at their August 9-10, 2004, meeting.	Update: Ted is hopeful they will have a draft by July. They will send it out for review and then share it with the TWG.
5	GCMRC (Ted Melis) will endeavor to provide copies of the Feasibility Assessment on Augmentation and Refugia and provide copies of the report to the TWG upon completion, and to the AMWG for their August 9-10, 2004, meeting. <u>Update: 5/3/04:</u> Bruce Taubert indicated on the Science Advisors' river trip that he would be willing to provide money to conduct a feasibility assessment for growout ponds in terraces above the Little Colorado River. Bill Persons will get an official statement from Bruce on what he committed to do and report back at the next TWG meeting.	Update: Ted reported that Barbara has been working on getting a revised version of the report from FWS as soon as possible or hopefully earlier than the genetics plan. Ted will send an expected date to the TWG.
6	TWG Members will work with their AMWG members in identifying the AMP's top 3 highest priorities for core monitoring (2 pages max) and send to Jeff Lovich by May 12.	
7	GCMRC and USBR will develop a visual matrix or flow chart that explains how the Long Term Experimental Plan, the Core Monitoring Plan, the AMP Strategic Plan, etc. fit together and present at the next TWG Meeting.	
8	Reclamation (Dennis Kubly) will confer with the Secretary's Designee (Michael Gabaldon) on the projects TWG approved for deferral from FY04 to FY05 per GCMRC's recommendations to see how they should be handled.	Update: Dennis spoke with Mike Gabaldon. The vote on deferrals was unclear. Reading minutes, it was unclear there was not consensus on them. Mike wanted to know what the vote was. Mike asked that the TWG discuss. When the AMWG passes a budget, it is passed down to the implementers, so if there are deviations, they should come back from the implementers to the AMWG. NEW ACTION: Jeff will present at the next AMWG meeting.
9	Jeff Lovich will visit with persons drafting the protocol to see if he can influence the direction of the protocol.	
10	TWG members should give Norm feedback on this issue. He will make it part of the report to the AMWG	
11	Jeff Lovich will read through the documents and send out a timeline for next meeting of CMAHG.	
12	USBR, NPS, and GCMRC to work out GIS data layer issues and report back to TWG at the next meeting.
