The primary trail is observed cutting through the center of the photo. In the photo from 2017 two trails can be observed, and in the photo from 2018 trailing has become deeper and more pronounced, indicated by the arrows.

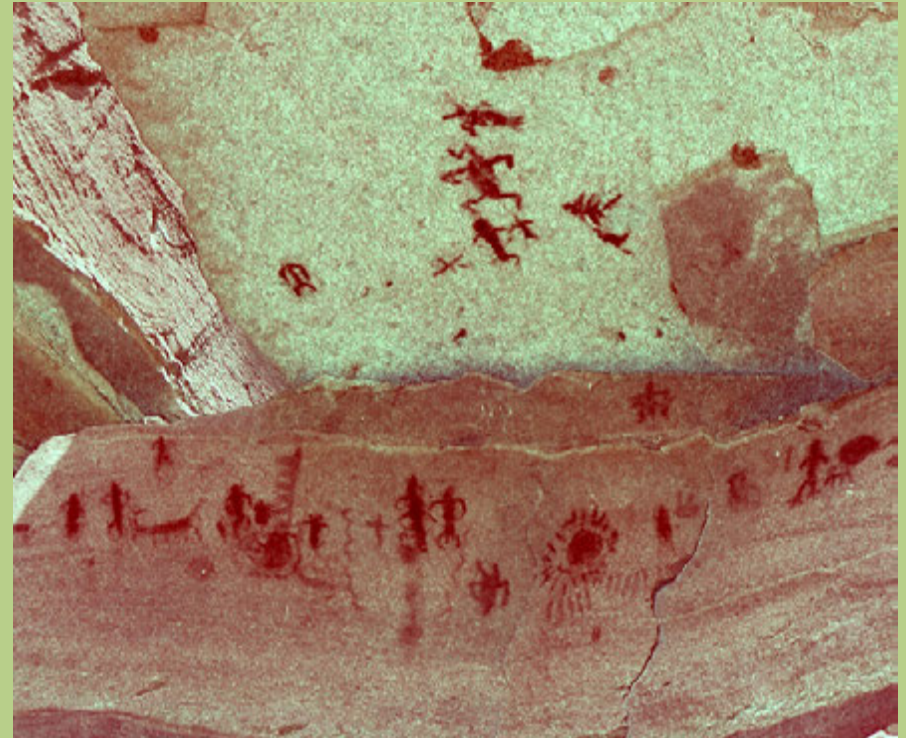

Trailing at the Tanner site. Photos from 2017 (left), and 2018 (right) illustrate ongoing and extensive trailing across the hillside.

The two to three inch "T" etched into a wall in the central part of the Deer Creek Narrows.

DStretch Photo Enhancement

Whitmore site, taken in 2018. On the right, the same photo after the DStretch photo enhancement software was applied
