

Hydropower Post-Workshop – Summarized Feedback

More information on the limitations and benefits of renewables or intermittent energy sources compared to Hydropower at GCD.

Discussion on the characteristics of battery storage cost and limitations of batteries to discharge less than the amount of power to charge them.

How have reserve margins changed as renewables have come on board?

More tribal perspective on hydropower

Need more discussion on alternative funding for LTEMP experiments

Hydropower Suggested Experiments

Lifting restrictions on Minimum flows to preserve in peak time energy use

HFE down ramping experiment to increase energy production during HFE

What else? What are the next steps?
