

February 2024 24-Month Study Projections Lake Powell and Lake Mead: End of Month Elevation Charts

Explanation of Hydrologic Scenarios

In addition to the February 2024 24-Month Study based on the Most Probable inflow scenario, and in accordance with the Upper Basin Drought Response Operations Agreement (DROA), Reclamation has conducted an additional model run in February to determine a possible range of reservoir elevations. Probable minimum and probable maximum model runs are conducted in January, April, August, and October, or when necessary to incorporate changing conditions. The Probable Minimum inflow scenario reflects a dry hydrologic condition which statistically would be exceeded 90% of the time. The Most Probable inflow scenario reflects a median hydrologic condition which statistically would be exceeded 50% of the time. The Probable Maximum inflow scenario reflects a wet hydrologic condition which statistically would be exceeded 10% of the time. There is approximately an 80% probability that a future elevation will fall inside the range of the minimum and maximum inflow scenarios. Additionally, there are possible inflow scenarios that would result in reservoir elevations falling outside the ranges indicated in these reports.

February 2024 Probable Minimum 24-Month Study

The water year (WY) 2024 unregulated inflow into Lake Powell in the February Probable Minimum inflow scenario is 5.69 million acre-feet (maf), or 59% of average. The Probable Minimum 24-Month Study includes a release volume from Glen Canyon Dam of 7.48 maf in WY 2024 and in WY 2025. Under the Probable Minimum scenario, Lake Powell's elevation is projected to be 3,545.41 feet on December 31, 2024. With intervening flows between Lake Powell and Lake Mead of 0.631 maf in calendar year (CY) 2024, Lake Mead's elevation is projected to be 1,054.33 feet on December 31, 2024.

February 2024 Most Probable 24-Month Study

The WY 2024 unregulated inflow into Lake Powell in the February Most Probable inflow scenario is 6.39 maf, or 74% of average. The Most Probable 24-Month Study includes a release volume from Glen Canyon Dam of 7.48 maf in WY 2024 and in WY 2025. Under the Most Probable scenario, Lake Powell's elevation is projected to be 3,565.61 feet on December 31, 2024. With intervening flows between Lake Powell and Lake Mead of 0.780 maf in CY 2024, Lake Mead's elevation is projected to be 1,056.99 feet on December 31, 2024.

January 2024 Probable Maximum 24-Month Study

The WY 2024 unregulated inflow into Lake Powell in the January Probable Maximum inflow scenario is 11.17 maf, or 116% of average. The Probable Maximum 24-Month Study includes a release volume from Glen Canyon Dam of 7.48 maf in WY 2024 and 9.00 maf in WY 2025. Under the Probable Maximum scenario, Lake Powell's elevation is projected to be 3,602.67 feet on December 31, 2024. With intervening flows between Lake Powell and Lake Mead of 0.929 maf in CY 2024, Lake Mead's elevation is projected to be 1,064.89 feet on December 31, 2024.
