Title: District Attorney

Contract: Contract No. 5-07-30-W0094

Authorized Acres: 6587 acres

Water Conservation Plan: The District is current in its Water Conservation Plan.

Summary - McPherson Lateral Lining Project

Through Contract No. 5-07-30-W0094 NGVIDD shares an entitlement to consumptive use of 250,000 af of Colorado River water with the two other districts, Yuma Mesa Irrigation and Drainage District and Yuma Irrigation District, in the Yuma Mesa Division of the Gila Project, Arizona. The District is authorized to irrigate up to 6587 acres.

NGVIDD diverts Colorado river water through two turnouts from the Gila Gravity Main Canal of the Gila Project, Arizona. North Gila turnout no. 1 is 7 miles from Imperial Dam and North Gila turnout no. 2 is 11 miles from Imperial Dam. The two turnouts have capacities of 150 cfs and 50 cfs respectively. There are 10.2 miles of canals, mostly soil lined, and about 15 miles of laterals, mostly soil lined, in the District. Drainage is necessary and is provided by open drains.
and the adjacent Colorado River on the west side of the District and the Gila River on the south side of the District.

The three Phase Project will line and reline 7,393 feet of the McPherson lateral. The first Phase of 2210 feet was completed in August 2016. The second Phase is 3737 feet. The remaining 1446 feet will be done in Phase 3.

All three Phases will be constructed by Crawford Associates of Blythe, CA, who has provided the best option for completing the Phase 2 of the Project with a construction estimate of $173,693.75. (estimate attached). The per unit cost, including turnouts and checks, is under $94.50 a lineal foot. Additional costs for legal, engineering, inspection and miscellaneous expenses are $14,135.00 for a total budget of $187,828.75.

The most prominent task area component of this application is improved water use efficiency in NGVIDD. The District’s Water Conservation Plan addresses on-farm irrigation system improvements made by lining the ditches and structures to reduce seepage and ditch breaks and enabling management of level basins, thereby increasing efficiency of water use.

The McPherson Lateral provides water to the central lands of the District. Due to age, the lateral lining is severely deteriorated.

The leakage and seepage from the deteriorated lateral results in water quality degradation and soil quality degradation.

The proposal is to rehabilitate the lateral by rebuilding the lateral with a new pad, increasing the size to 40", and concrete re-lining the lateral thus increasing flow capacity and efficiency.

The Project Schedule is for 8 weeks beginning in mid-July 2017.

The benefits include - better water management planning, greater efficiencies in water deliveries, decreases in groundwater levels affecting farming operations and decreases in water loss through seepage.

E.1. Evaluation Criteria

E.1.1. Evaluation Criterion A—Planning Efforts Supporting the Project

Describe how your project is supported by an existing planning effort.
The District is current in its Water Conservation Plan with Reclamation. That planning effort supports this project.

• Does the proposed project implement a goal or address a need or problem identified in the existing planning effort?

Efficiencies in water measurement and ordering are main targets of the District Water Conservation Plan. This project will significantly contribute to efficient
measurement and delivery of water. That in turn will assist in more accuracy in water ordering. More accuracy in water ordering will help to decrease the excess water on the Colorado River which may have to be delivered to Mexico in excess of its order.

Water conservation achieved by lining and improving 7,393 feet of a main lateral in a 6587 acre district is major. It is acknowledged that the concrete work is taking two and possibly three phases due to financial considerations mostly grant funds availability.

Water Quality Degradation: there are salts in surface waters and ground waters used for irrigation. The project will rehabilitate 3737 feet of the McPherson Lateral. Currently, the condition of the lateral allows for seepage of Colorado River water which concentrates salts into the return flows to the river.

Inefficient use of irrigation water; Inefficient moisture management (Drought). The project will increase the efficiency of water delivery by providing increased lateral capacity which will allow shorter irrigation turns.

Soil Quality Degradation: Concentration of salts and other chemicals. Salt concentration can be a significant problem for the lands of the Gila Valley including the lands of NGVIDD. Rehabilitating the lateral will reduce the seepage and therefore decelerate the soil quality degradation due to salt concentration.

• Explain how the proposed project has been determined as a priority in the existing planning effort as opposed to other potential projects/measures.

Lining contributes to conservation of water by decreasing the amount of water lost due to seepage. It is well recognized that the farmers are the ones who benefit the most from more accurate and efficient delivery of water. Farming in the area today often uses high volume turn outs which are critical to the continued decline in water use on the produce during the season. The high priorities of getting the right amount of water on the crops, resulting in using less water to grow more crops, is conservation. The continued use of soil lined canals and laterals negatively impacts efficiencies and conservation. Water losses and additional water needed because of the inefficiencies of the delivery system beyond seepage are significantly great. Reducing such inefficiencies is the high priority of this project.

E.1.2. Evaluation Criterion B—Project Benefits

• Describe the expected benefits and outcomes of implementing the proposed project.

o What are the benefits to the applicant's water supply delivery system?

As mentioned above - the benefits are in the increased efficiencies in water ordering and water delivery to the fields. Less water is used when it is conveyed through
a concrete lined facility. Leakage and seepage are two related problems addressed by this project.

Lined laterals in gopher country, greatly increase the safety of the system because the concrete lining is an effective gopher barrier. Loss of a lateral during produce season is a risk which can be mitigated by lateral lining. Damages to the farmer from a field loss in a lateral blowout caused by gophers or other defects start in six figures and can go to seven figures.

If other benefits are expected explain those as well. Consider the following:

- **Extent to which the proposed project improves overall water supply reliability**

  Reliability of the overall water supply is increased by lining as provided in this project because there less risk of lateral failure.

- **The expected scope of positive impact from the proposed project (e.g., local, sub-basin, basin)**

  In an area which is forecasting over delivery of water to Mexico at 25,000 to 30,000 af this year, even seemingly small volumes of water which are conserved by the District through this project can impact uses on the lower Colorado River.

  At this time, due to drought and shortage from over-allocation, we work to keep water in the river maintaining the elevation of Lake Mead. This project contributes water to the Lake Mead or to the Central Arizona Project, depending on how you view it.

- **Extent to which the proposed project will increase collaboration and information sharing among water managers in the region**

  The District is a member of both Gila Gravity Administrative Board and the Imperial Dam Advisory Board which meet regularly. The information on this lining will be shared to the mutual benefit of the districts in the area.

- **Any anticipated positive impacts/benefits to local sectors and economies (e.g., agriculture, environment, recreation, tourism)**

  The McPherson lateral lies within some of the most fertile soil in the world. Increasing and maximizing the efficiency of the lateral helps a multi-billion dollar economic drive to continue to provide winter vegetables to the United States and Canada.
E.1.3. Evaluation Criterion C—Project Implementation

• Describe the implementation plan for the proposed project. Please include an estimated project schedule that shows the stages and duration of the proposed work, including major tasks, milestones, and dates.

Because the District needs funding for the project, it has divided the overall project into three phases. This grant application applies to Phase 2 of the McPherson Lateral Lining Project. Each phase can be completed in about two months. The schedule for this Phase 2 is July and August 2017.

• Describe any permits that will be required, along with the process for obtaining such permits.

No permits are required for this project.

• Identify and describe any engineering or design work performed specifically in support of the proposed project.

Engineering, including field work—design and drawing, was performed by James Davey and Associates of Yuma, Arizona.

• Describe any new policies or administrative actions required to implement the project.

None

E.1.4. Evaluation Criterion D—Nexus to Reclamation

• How is the proposed project connected to a Reclamation project or activity?

The District (NGVIDD) is one of the three districts with a shared entitlement to 250,000 af of water from the Colorado River as part of the Yuma Mesa Division of the Gila Project, Arizona.

• Will the project help Reclamation meet trust responsibilities to any tribe(s)?

No, this project will not assist Reclamation in meeting trust responsibilities to any tribes. Although the District did participate in the 1980s in the water transfer of 50,000 af of its shared entitlement to assist in the Ak-Chin Indian Water Rights Settlement.

• Does the applicant receive Reclamation project water?
The District receives its Colorado River water entitlement through the Gila Project Arizona Gila Gravity Main Canal which forms the eastern border of the District.

- **Is the project on Reclamation project lands or involving Reclamation facilities?**
  
  Yes, the McPherson Lateral is a Reclamation facility which is maintained and operated by the District.

- **Is the project in the same basin as a Reclamation project or activity?**
  
  Yes, the District, and therefore the McPherson Lateral is in the Gila Project Arizona and is bordered on the west by the Yuma Project, Arizona.

- **Will the proposed work contribute water to a basin where a Reclamation project is located?**
  
  Most certainly. The increased water savings resulting from the canal lining returns water to the Colorado River where it is picked up by another Reclamation project, the Central Arizona Project.

Payment of this contract will be on the basis of actual units of work measured in place.

**DATE:** 4/21/2017

Crawford Associates, by *Bill Crawford*

I, am the owner, or his duly authorized agent, and have the authority to Contract for the work above on the described property, and hereby authorize Crawford Associates, to furnish all materials and labor referred to, according to the terms and conditions on both pages of this contract.

**ACCEPTED**

Date ____________ By ___________________ Title ____________
TERMS AND CONDITIONS

1. SCOPE OF CONTRACT
   Contractor agrees to furnish all of the labor, materials and equipment referred to according to the terms and conditions on both pages of this contract.

2. TIME OF PERFORMANCE
   Construction will begin as soon as crop conditions will permit following a mutually agreed starting date.

3. SPECIFICATIONS
   Except as modified by the express covenants contained in this contract, all work shall be performed in accordance with established methods of construction approved by the National Resource Conservation Service. Concrete thickness shall be determined on the basis of total batch volume required for the specified thickness of concrete.

4. INSPECTION
   The owner agrees that either he or his agent will be available to inspect and approve the following:
   (a.) The design, capacities and location of the work contemplated prior to starting of construction.
   (b.) The material and workmanship of the work as it progresses.

   It is further understood and agreed that if the owner or his agent is not available or remains silent, it will be necessarily assumed that he has approved the work and agrees not to hold the contractor responsible for the work after it has been installed.

5. DAMAGE
   The owner agrees not to hold the contractor responsible for damage caused by overflowing of water, weather, expansion or contraction of the concrete, swelling or shrinking of the soil after the work has been installed.

6. EXTRA PAYMENT
   It is understood and agreed that the owner will pay the contractor extra for the reasonable value of labor, materials or equipment furnished in the performance of any extra work, alterations or delays caused by the owner or his agent. It is further understood and agreed that the owner will pay the contractor extra for the performance of the following:
   (a.) Removing debris, pipe, checks, water, fences or any other obstruction from the proposed lined section prior to the start of construction.
   (b.) Irrigating the ditch pad after preliminary grading.
   (c.) Dirt or water hauling necessary for construction.

7. PAYMENT
   The owner agrees to pay CRAWFORD ASSOCIATES, within ten days after date of billing for the work accomplished. In the event it should become necessary for CRAWFORD ASSOCIATES, to enforce the terms of the agreement in such event the owner promises to pay a Late Payment Charge of 2% per month (24% per year) beginning ten days after date billing, plus collection costs and attorney's fees.

NORTH GILA VALLEY IRRIGATION AND DRAINAGE DISTRICT

RESOLUTION 2017-1

McPherson Lateral Lining Project Phase 2

Resolution Adopting financial and legal obligations of North Gila Valley Irrigation and Drainage District "District".

BE IT RESOLVED BY THE BOARD OF DIRECTORS OF THE NORTH GILA VALLEY IRRIGATION AND DRAINAGE DISTRICT

The Board of Directors has appointed Wade Noble, General Counsel for the District, to enter into an agreement for financial assistance on behalf of the Board in connection with the McPherson Lateral Lining Project Phase 2.

The Board of Directors has reviewed and supports the application being submitted.

The Board of Directors acknowledges that the District is capable to provide the amount of funding and/or in-kind contributions specified in the funding plan.

The Board of Directors will work with Reclamation to meet established deadlines for entering into a grant or cooperative agreement.

I do certify that the foregoing and attached is a true and correct copy of the resolution as it appears on the minutes of the Board of Directors of the North Gila Valley Irrigation and Drainage District, passed and adopted by the Board as of May 9, 2017.

Maryann C. Warner, Secretary
North Gila Valley Irrigation and Drainage District
